

THE POWER OF DESIGN AND DOCUMENT OUTPUT MANAGEMENT

ACOM's EZeDocs combines the power of automation and personalization with dynamic and more effective transactional documents and communications; easily operated and affordable for organizations of any size.

Design and Document Output Management Tools for your QAD system

ACOM's EZeDocs provides powerful, yet affordable and easy-to-use document output functionality for users without any need for programming changes or costly ERP customization.

With EZeDoc's intuitive graphics and rules engine users easily transform, personalize and deliver transactional business output by combining pre-defined and ad-hoc content with data from virtually any ERP/Accounting third-party system.

The Power of Automation and Personalization

Automatically generate targeted transactional documents and communications with unique messaging, and branding. Include business logic with customer-specific data to personalize documents with bar codes, logos and signatures. Then, efficiently automate delivery electronically via email, fax, web and secure archive; or distribute to high quality print and offline channels.

You can create and deliver content tailored specifically to your business processes and individual client needs with user-driven features and tools for format, layout and delivery of critical business documents such as invoices, purchase orders, reports, checks, forms and more:

■ EZDesigner

Easy-to-use 'drag & drop' design tool allows non-technical staff to quickly reformat data output, build "intelligent documents" and generate output-ready data streams for print, fax, email, digital archive or via web.

■ Conditional Output

User can create rules to identify different data types and associations with specific conditions for producing printed, faxed, emailed, and file output.

■ Dynamic Document Flexibility

Customize the document design by applying printing conditions to page elements (fields, images, shapes, and more).

■ Intelligent Routing & Processing

Supporting standard file formats, EZeDocs lets you input data on when, how and where information is needed... and tailor it to the recipient's preferred delivery method.

■ Optimized High Volume Print/Lower Handling and Postage

For interactive, on demand or batch document generation, EZeDocs provides organizations the ability to leverage internal or external printing services and/or mail house routings according to data contexts and business logics... taking immediate advantage of the lower cost of consolidated mail distributions.

■ Exportable Metadata

For indexed delivery to EZContentManager or third-party content management system.
