

LICENSING

Licensing Metrics

Concurrent User shall mean any database session, including a fax session, a print session, a batch processing session, background session or any other similar type of session. Concurrent User licenses are only available to Licensees that have already purchased such licenses in the past.

Named User shall mean each individual or device that is permitted to perform an operation on a database.

Server shall mean a hardware platform running Precision Software applications.

Transaction shall mean a shipping transaction as documented in a single shipment header record and related shipping detail records, stored and counted in the system.

Process shall mean an instance of a program, running unattended on any device, that can invoke functionality provided by the Software.

Additional Terms for Specific Products

Package Exception Management. Limited Use Modules included: TMS Base.

Progress Software Corporation, Backups and Failover Environments. Licensee is allowed to make copies of the Software for archive and back-up purposes. Additionally, Licensee can use the Software in a failover environment on the condition that the failover environment is set up as a passive mirror against which applications cannot execute, transact or query directly. In this scenario, failover is accomplished by after-imaging. If the files in the failover environment are maintained in such a format or configuration that a relevant application can execute, transact or query directly against them, additional licenses for the software from Progress Software Corporation are required.
