

Welcome to the QAD Global Trade and Transportation Execution Help

The online help provides the guidance you need to navigate and optimize QAD's Global Trade and Transportation Execution solution.

Global Trade

In today's dynamic trade environment, shaped by rapidly evolving regulations, shifting sanctions, and expanding restricted party lists, staying compliant is more complex than ever. As supply chains become increasingly global and cross-border operations grow, businesses face mounting pressure to adapt.

QAD Global Trade Compliance offers a unified, cloud-based platform that simplifies import, export, and transportation processes. Our solution ensures compliance with the latest international trade laws, reduces risk, and enhances operational efficiency through integrated trade compliance and transportation execution.

Stay ahead of global trade disruptions. Ensure compliance. Simplify execution.

Transportation Execution

Efficient transportation management reduces costs, improves delivery reliability, and increases shipment visibility. QAD's transportation solutions transform shipping, whether it is parcel carrier shipments or global freight, into a competitive advantage.

QAD offers global multi-carrier transportation execution and parcel carrier management, integrating with carriers and automating documentation.

With features like Multi-Carrier Shipping, Desktop Shipping, Delivery Exception Management, Freight Bill Audit and Pay, and Transportation Analytics, you get real-time control of shipments. QAD empowers you to choose the best carrier, verify costs, manage exceptions, and optimize parcel and freight logistics.

Key Capabilities

- [Import Management on page 667](#)—Mitigate regulatory risk, reduce costs, and streamline global trade operations. Import Management automates and executes your import processes to ensure efficient, compliant, and seamless entry of goods. With advanced import compliance
- [Transportation Execution on page 1489](#)—Plan, execute, and optimize shipments across all carriers and transport modes to ensure on-time delivery and lower costs. This global, multi-carrier solution allows you to standardize inbound and outbound processes, control

Key Capabilities

- software, your organisation can proactively manage new product requirements, AI-driven classification recommendations, and admissibility rules, minimizing costly delays at the border.
- [Export Management on page 561](#)—Simplify export processes, reduce regulatory exposure, and eliminate hidden costs. Automate export workflows, documentation, and customs reporting with QAD Global Trade Compliance’s export compliance software. Our solution helps mitigate risks in dynamic trade environments and cuts unnecessary costs tied to international operations.
- **Restricted Party Screening**—Automate vendor and trading partner screening to ensure compliance. Governments and international bodies issue denied party lists identifying individuals and entities linked to crime, terrorism, or weapons proliferation. With QAD Global Trade Compliance, your organization can automatically screen and validate trading partners to ensure compliance and avoid restricted party violations.
- [Global Trade Compliance Analytics on page 1853](#)—Unlock real-time insights into your global trade compliance operations with on-demand dashboards and actionable analytics. QAD Global Trade Compliance delivers intuitive visualizations and key performance metrics to monitor screening throughput, shipping spend, and automate documentation.
- [Multi-Carrier Shipping on page 1489](#)—Access a global network of certified carriers and seamlessly switch between them to find the best rates, service levels, and transit times for every shipment. With flexible carrier options, you can reduce costs and improve service for your customers.
- [Desktop Shipping on page 1509](#)—Standardize shipping procedures across all locations, ensuring consistent, compliant practices while controlling parcel carrier spend. Empower staff to handle restricted party screening, carrier selection, and documentation with ease.
- [Delivery Exception Management on page 1186](#)—Achieve global shipment visibility through real-time tracking and automated alerts for potential delivery delays. Proactively resolve issues before they impact your customers.
- [Freight Bill Audit & Pay on page 1315](#)—Verify freight costs automatically to prevent overpayments and improve financial accuracy. Leverage intelligent automation to quickly identify discrepancies and control shipping spend.
- [Transportation Analytics on page 1845](#)—Gain real-time insights into your shipping performance with intuitive dashboards and actionable metrics. Drill down into key performance indicators like volume, costs, and carrier

Key Capabilities

transaction reviews, and failures. Combined with robust compliance management capabilities such as pre-shipment checks, automated workflows, dual-use goods, embargoed countries, denied party screening, license management, and audit-ready documentation. Our solution empowers teams to optimize processes, reduce false positives, minimize risk, and maintain full regulatory oversight.

- **Free Trade Agreement Software**—Automate free trade agreements (FTA) origin determination and compliance. Free Trade Agreements (FTA) automates compliance for all FTAs recognized by the World Trade Organization, and covers Rules of Origin across all harmonized system (HS) headings.
- **Electronics Customs Integration**—Accelerate customs clearance with reduced delays and penalties. Streamline the exchange of trade data between internal systems and customs brokers by automating communication and reconciliation. QAD Global Trade Compliance identifies discrepancies between internal records and broker submissions, allowing teams to quickly review and resolve issues. Automatically transmit product details such as classification and origin through scheduled jobs and APIs to ensure accurate, timely data for customs processing. Improve

service levels to continuously improve logistics efficiency.

Key Capabilities

compliance and visibility, reduce manual errors, accelerate clearance, and minimize costly delays and penalties.
