About This Course

Course Description

QAD designed this course to cover the basics of the supplier schedules functionality of QAD Enterprise Applications. This course includes:

- An introduction to supplier schedules
- An overview of key business considerations
- Setting up supplier schedules
- Operating supplier schedules
- Activities and exercises throughout the course let students practice key concepts and processes in supplier schedules

Course Objectives

By the end of this class, students will:

- Analyze key business decisions before setting up supplier schedules
- Set up and operate supplier schedules

Audience

- Implementation consultants
- Members of implementation teams
- Operators
- Information Systems (IS staff who support the EDI EDI eCommerce interfaces)

Prerequisites

- Basic knowledge of:
 - Hardware and network configurations
 - QAD Enterprise Applications as it is used in the business
- Working knowledge of the manufacturing industry in general

Note Students unfamiliar with QAD Enterprise Applications should work through *User Guide: Introduction* before attending this class.

Course Credit and Scheduling

This course is designed to take two days.

Virtual Environment Information

The hands-on exercises in this book should be used with the latest Enterprise Edition learning environment in the 10USA > 10USACO workspace. When prompted to log in, specify *demo* for user ID and *qad* for password.

Additional Resources

If you encounter questions on QAD software that are not addressed in this book, several resources are available. The QAD corporate Web site provides product and company overviews. From the main site, you can access the QAD Learning or Support site and the QAD Document Library. Access to some portions of these sites depends on having a registered account.

<http://www.qad.com/>

QAD Learning Center

To view available training courses, locations, and materials, use the QAD Learning Center. Choose Education under the Services tab to access this resource. In the Learning Center, you can reserve a learning environment if you want to perform self-study and follow a training guide on your own.

QAD Document Library

To access release notes, user guides, training guides, and installation and conversion guides by product and release, visit the QAD Document Library. Choose Document Library under the Support tab. In the QAD Document Library, you can view HTML pages online, print specific pages, or download a PDF of an entire book.

To find a resource, you can use the navigation tree on the left or use a powerful cross-document search, which finds all documents with your search terms and lets you refine the search by book type, product suite or module, and date published.

QAD Support

Support also offers an array of tools depending on your company's maintenance agreement with QAD. These include the Knowledgebase and QAD Forums, where you can post questions and search for topics of interest. To access these, choose Visit Online Support Center under the Support tab.

4 Training Guide — Supplier Schedules

Chapter 1

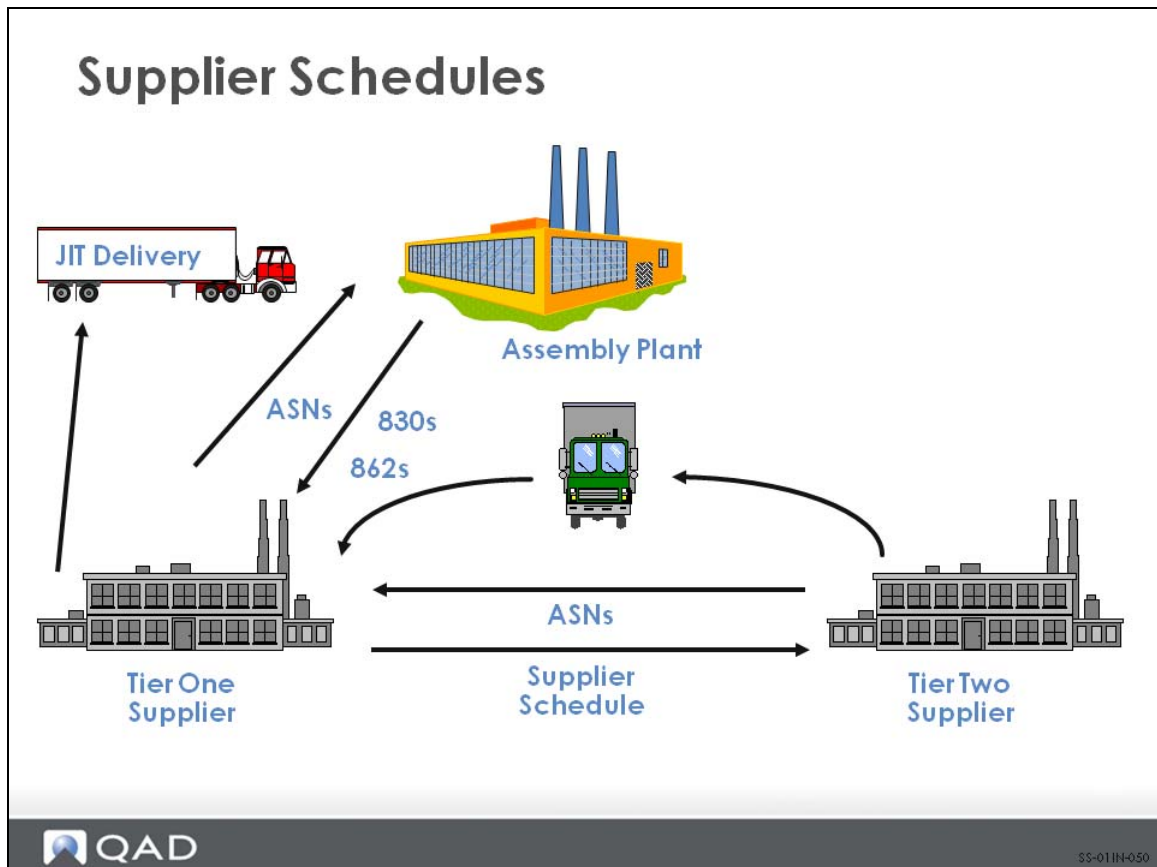

Introduction to Supplier Schedules

Course Overview

Course Overview

- Introduction to Supplier Schedules
- Business Considerations
- Set Up Supplier Schedules
- Process Supplier Schedules
- Process Supplier Schedule Receipts

Supplier Schedules

Supplier schedules are period-oriented schedules that are generated on a daily, weekly, or monthly basis. They have their roots in practices developed by the automotive industry.

- The automotive industry requires the communication of releases and the sending of Advance Ship Notices (ASNs).

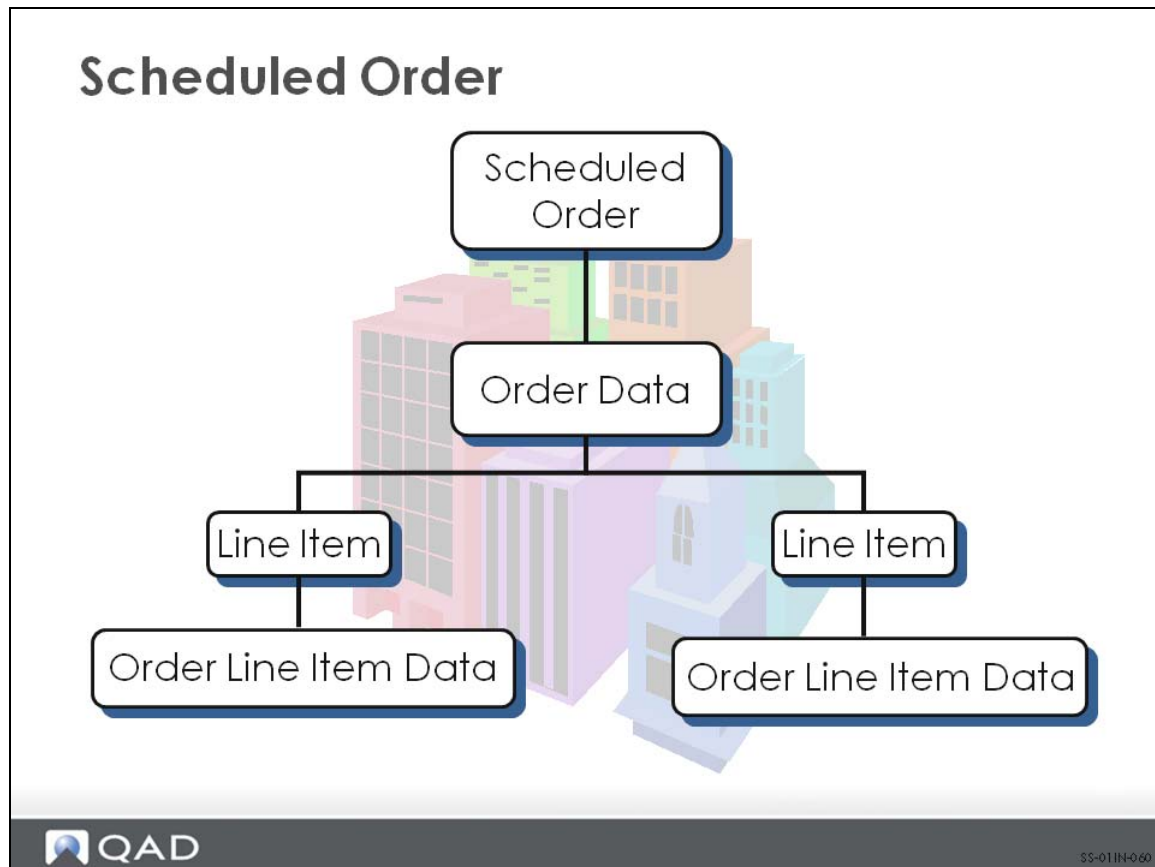

Note Some companies pay only from the ASN.

- Supplier schedules allow automotive companies to maintain an uninterrupted flow of work through manufacturing, while maintaining minimum levels of inventory.

Companies using supplier scheduling share a common profile:

- High production volumes
- Long-term commitments with suppliers
- Frequent shipments from suppliers
- Normally use EDI (Electronic Data Interchange)—in QAD Enterprise Applications, the EDI eCommerce module

Scheduled Order

When a scheduled order is created, several parameters are defined that the system uses to calculate receipt, planning, and shipping schedules for the items to be purchased. These items are entered on separate order lines. A scheduled order combines fields found on a purchase order header with order trailer fields and specific line item information. This information forms the structural base against which item quantities and dates are scheduled.

Order Data

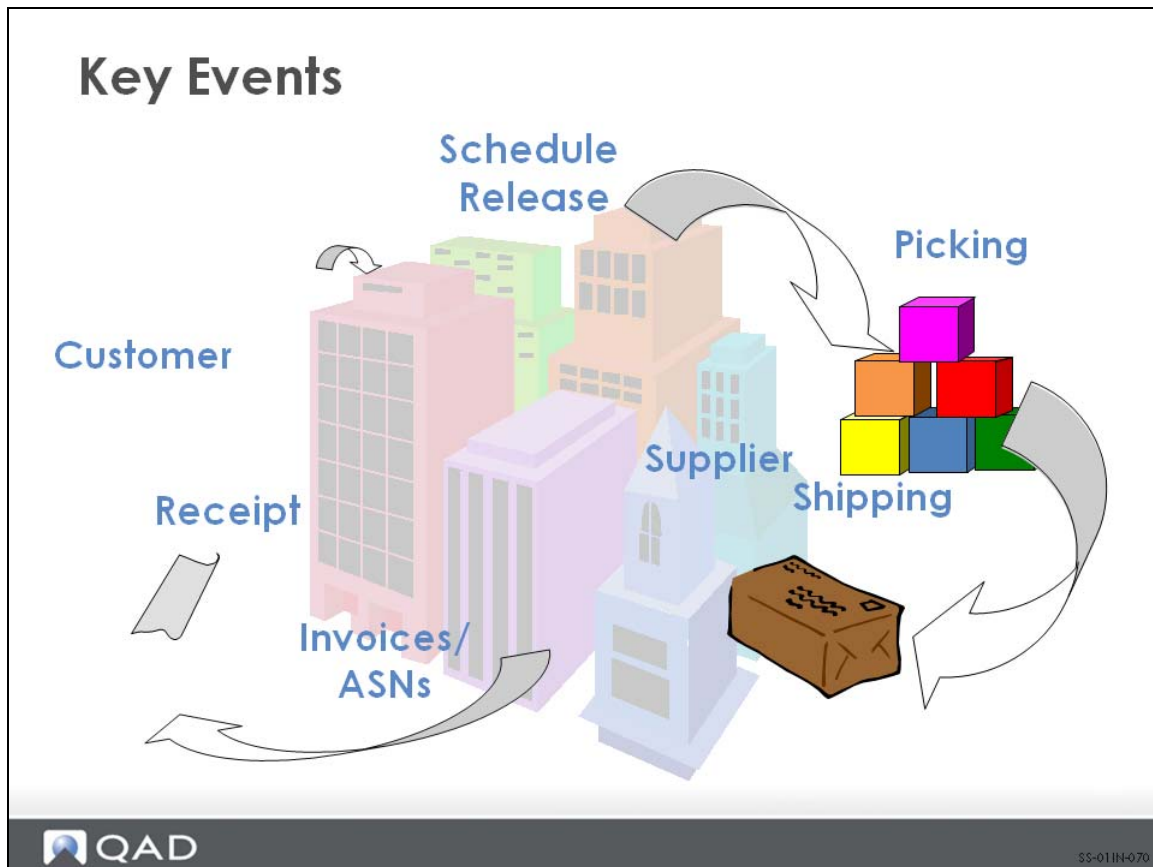

The order data applies to the entire order. There are two sections. The first section identifies the purchase order and supplier. The purchase order number can be system or user-assigned. The second section is the Order Data frame. This frame contains the shipping and credit information, and how to transmit the order to the supplier (fax, EDI). You can also enter comments for the entire order.

Order Line Item Data

After completing the order data, enter the specific order line item data, using the Order Line Item data frames. You can also enter comments. For each line item enter information such as:

- Item number for the item being purchased
- Site receiving the purchased item
- Line item details
- Schedule details

Key Events

- 1 The customer determines what they need and when they need it.
- 2 Supplier runs Material Requirements Planning (MRP).
- 3 Create a scheduled order.
- 4 Schedule release is sent to supplier.
- 5 Order items are picked.
- 6 Order is shipped.
- 7 Customer receives order.

Terminology

Terminology

- Advanced Ship Notice (ASN)
- Electronic Data Interchange (EDI)
- EDI ECommerce
- Fabrication/Raw Material Authorization
- Release
- Scheduled Order

SS-011N-060

Advance Ship Notice (ASN). An electronic document derived from a shipper document and sent by a supplier to a customer when a shipment leaves the supplier site, informing the customer that the shipment is on the way. ASN formats are defined for various international standards; for example, an 856 Transaction Set per ANSI ASC X12. An ASN takes the place of an invoice in some supplier-customer arrangements.

Electronic Data Interchange (EDI). An international protocol for electronically transmitting documents such as customer schedules, invoices, and ASNs between trading partners.

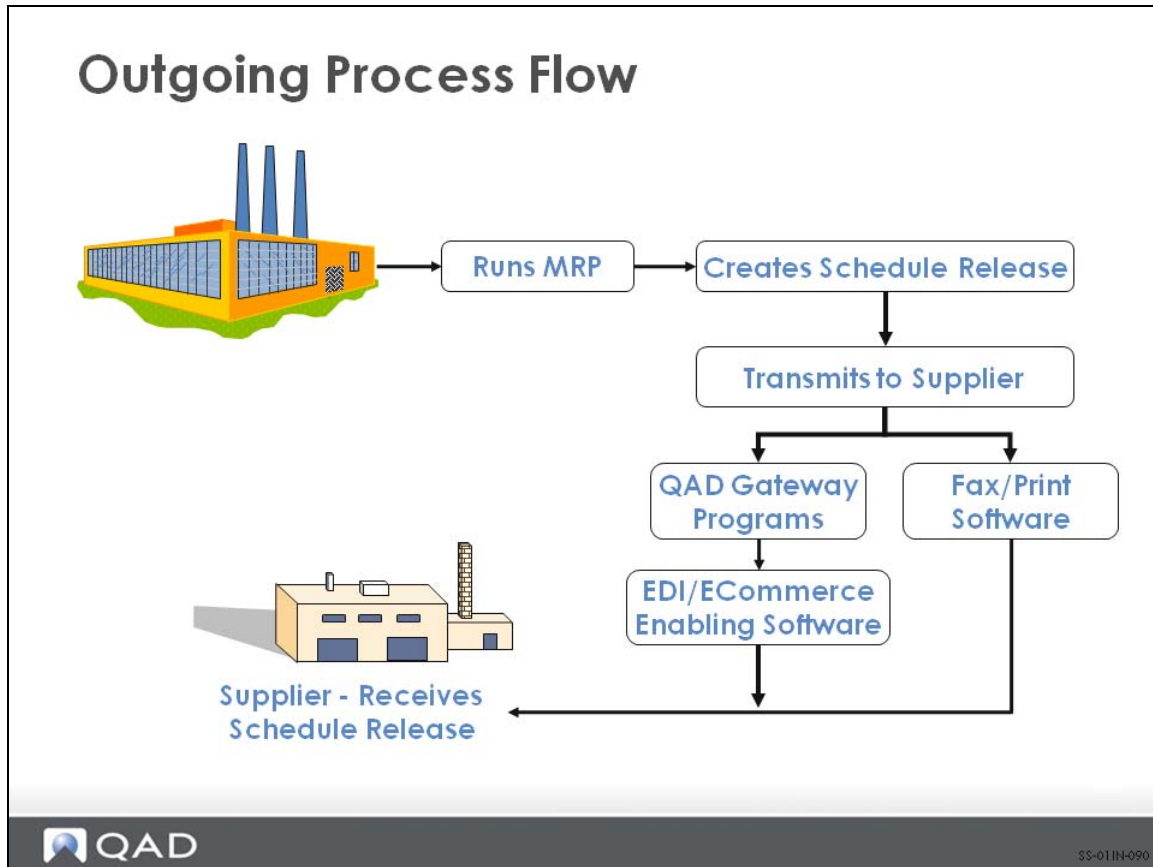

EDI eCommerce. The EDI component of QAD Enterprise Applications.

Fabrication Authorization. Communication with a customer to a supplier authorizing them to fabricate items through a specified time period. Acts as the customer's agreement to pay for all items fabricated within the authorization horizon.

Release. A schedule based on a scheduled order.

Scheduled order. A specialized sales or purchase order that has schedules attached to it for the suppliers to ship against. The scheduled order can have an indefinite term. The scheduled order serves as the basis for creating the customer and supplier schedules.

Outgoing Process Flow

Supplier schedules allow you to manage the relationships with suppliers to whom you transmit period-oriented demand with statements called releases.

- Releases are typically sent using EDI or eCommerce
- Releases can be sent by fax or a printed release

With EDI eCommerce:

- Release information is taken from the QAD Enterprise Applications supplier schedules
- Mapped through the QAD Enterprise Applications gateway programs into EDI eCommerce readable messages
- EDI-enabling software is used to export the releases to a supplier's computer or electronic mailbox
 - Each supplier may have their own EDI requirements and signal standards
 - Handled by the EDI-enabling software after the information is passed from QAD Enterprise Applications

Without EDI eCommerce:

- Schedule releases can be printed and faxed, or a fax server used for transmission
- Can be printed and sent

Incoming Process Flow

With EDI eCommerce:

- Often occurs when there is a significant transportation lead time involved, or
- If the supply chain has recognized the advantage of single keying of dispatches/receipts

ASNs reduce the need for expediting at the customer end by providing visibility while the goods are still in transit.

Note If you are using EDI eCommerce, an ASN merely needs to be received for items and quantities to make a receipt, rather than keying in all the details again.

Without EDI eCommerce:

- Create a shipper
- Receive the shipper

Course Objectives

Course Objectives

In this class you learn how to:

- Identify key business considerations before setting up Supplier Schedules in QAD Enterprise Applications
- Set up Supplier Schedules in QAD Enterprise Applications
- Process Supplier Schedules in QAD Enterprise Applications
- Process Supplier Schedules Receipts in QAD Enterprise Applications

Chapter 2

Business Considerations

Business Considerations

In this section you learn how to:

- **Identify key business considerations before setting up Supplier Schedules in QAD Enterprise Applications**
- Set up Supplier Schedules in QAD Enterprise Applications
- Process Supplier Schedules in QAD Enterprise Applications
- Process Supplier Schedules Receipts in QAD Enterprise Applications

Business Considerations

- Tracking
- EDI/EDI ECommerce
- Price Lists
- Planning Horizon
- Evaluated Receipts Settlement (ERS)

Tracking - Cumulative

Period	1	2	3	4	5	6
Net Demand	1,000	1,000	1,000	1,000	1,000	1,000
Cumulative	1,000	2,000	3,000	4,000	5,000	6,000
	Cum Start					
Cum shipped = 2,500						
Net Required Qty.	0	0	500	1,000	1,000	1,000

Definition

Two methods are used by trading partners to maintain totals of required and shipped/received quantities:

- Cumulative accounting maintains running totals for each shipped/received quantity.
- Non-cumulative accounting methods are calculated from discrete quantities and are adjusted using the cumulative quantity required less the cumulative quantity received or shipped.

Why Consider?

- Traditionally, schedules in the automotive industry have been based on cumulative accounting
 - Total schedule quantity determined for a period, often a year
 - Effect of each shipment to a customer was calculated based on a cumulative total
- Today many business environments use release management to ship against specific requirements

Functionality in QAD Enterprise Applications

- Monitor received/shipped quantities; quantities can be adjusted

Setup Implications

- Supplier Scheduled Order Maintenance (5.5.1.13) needs to be set up to reflect when quantities begin to accumulate as agreed upon between you and your supplier

Tracking Terminology

Tracking Terminology

- Cum Received
- Cum Required
- Cum Shipped
- Cum Start Date
- Cumulative Accounting
- Prior Cum Date
- Prior Cum Required

SS-BU-040

Cum Required. The gross cumulative quantity on order at any point in a customer schedule.

Cum Shipped. The cumulative total shipped by the supplier.

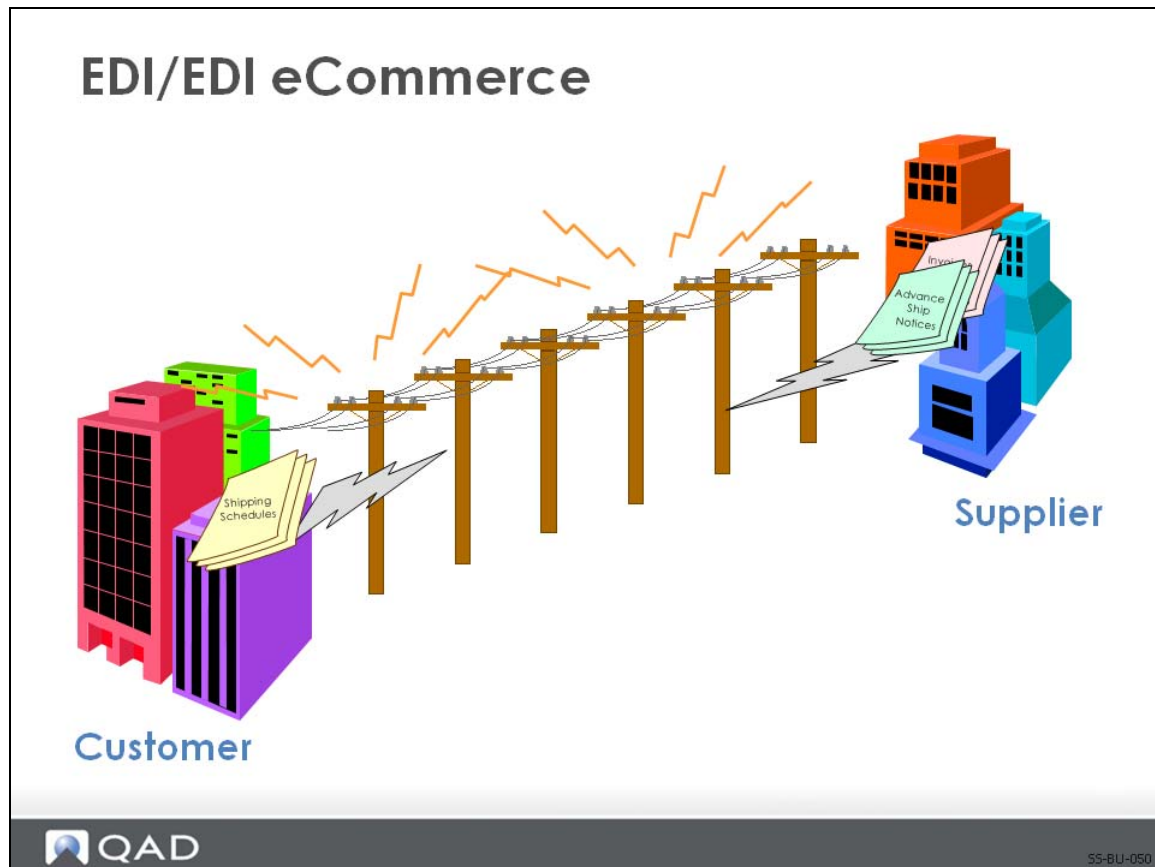

Cum Start Date. The date a scheduled order shipment began accumulating quantities.

Cumulative Accounting. A method of tracking shipments and receipts in which trading partners maintain running totals of required and shipped/received quantities.

Prior Cum Date. The up to and through date of a prior cumulative required quantity.

Prior Cum Required. The total quantity required prior to the date of release.

EDI/EDI eCommerce

Definition of EDI. An international protocol defining the means and methods for electronic transmission of documents between trading partners. Documents are transmitted in a highly structured format that can be processed by computer software.

Definition of eCommerce. eCommerce is the interface between QAD Enterprise Applications and third-party EDI communications or translator products called EC subsystems. eCommerce enhances the system's ability to manipulate, analyze, edit, and reprocess EDI data.

Why Consider?

- Time saving
 - Information processed faster
 - Shortened response times
- Reduced data input
 - Reduces errors
- Saves labor costs
 - Reduces/eliminates paperwork, fewer people are needed
- Lower inventory levels

Functionality in QAD Enterprise Applications

- Support import of ASNs (856) and invoices (810)
- Support export of schedule releases (830)

Setup Implications

- EDI eCommerce software, files, and so forth need to be set up
- Modify user-edited programs to meet trading partner requirements
- Trading Partner Parameters Maintenance (35.13.10) needs to be set up
- Supplier Data Maintenance (2.3.1) needs to be set up with supplier information
- Supplier Item Maintenance (1.19) needs to be set up with supplier item cross-references
- Document Import (35.1) recognizes the supplier item number on the imported document and converts it to your internal item

Supplier Price List Maintenance

Supplier Price List Maintenance

Supplier Price List Maintenance
Go To Actions Copy Print Preview Attach

Price List:

1	2,000.0	20	1,850.0	0	0.0
2	1,980.0	0	0.0	0	0.0
3	1,975.0	0	0.0	0	0.0
5	1,950.0	0	0.0	0	0.0
10	1,900.0	0	0.0	0	0.0

SS-BU-060

Price lists represent a convenient tool for inputting item prices for suppliers without having to perpetually maintain the scheduled order. The scheduled order references a price list.

Functionality in QAD Enterprise Applications

- The price list is maintained separately
 - Note** Allows other departments to maintain prices, without having to access the scheduled order line.
- Each item needs to be input on the price list with its relevant price

Setup Implications

- Price lists need to be set up in Supplier Price List Maintenance (1.10.2.1) with an amount type set to P (Price) to be used with supplier schedules
- Scheduled Order Maintenance (5.5.1.13) needs to be set up to reflect the price list
- Supplier Maintenance (2.3.1) can be set up to reflect a price list for a particular supplier

Planning Horizons

Definition

A period, in calendar days, over which MRP is to plan. MRP processes material requirements only within this horizon.

The planning horizon determines how MRP plans or replans orders that are to be included in the scheduled release. It plans requirements only within its planning horizon.

Functionality in QAD Enterprise Applications

Planning horizon parameters are used by the system to generate the schedule. The schedule is seen by your supplier.

Note Supplier Scheduled Order Maintenance (5.5.1.13) needs to be set up to reflect the planning parameters for the scheduled order.

Evaluated Receipts Settlement (ERS)

Definition

ERS enables you to record a pending payment to a supplier without a supplier invoice. Liabilities to the supplier are recorded automatically, based on quantities received at the unit price established by you and the supplier in scheduled order agreements.

Why Consider?

ERS offers the following benefits:

- Reduced clerical workload and costs
- Fewer lost and duplicate invoices
- Fewer discrepancies between invoices and receiving data
- Earlier availability to customer of actual cost data
- Reduced need for customer to accrue unaudited liabilities
- Reduced forms, mailing, and data transmission cost to supplier

Functionality in QAD Enterprise Applications

ERS processing takes place when the shipper is received.

Setup Implications:

- Run ERS Conversion

- Creates records for every site and supplier in the current database
- Enable functionality and set ERS fields in ERS Control (28.10.24)
 - ERS Packing Slip Error
 - Update GL Average Cost
 - ERS Invoice Date Option
 - ERS Options
- ERS Maintenance (28.10.1)
 - Turns ERS processing on for supplier, site, and/or item
- Supplier Scheduled Order Maintenance (5.5.1.13)
 - Set ERS options at order level and at line item level

Review

Review

- Processes and Procedures
- Reporting Requirements
- Customer Expectations
- Product Configuration

Chapter 3

Set Up Supplier Schedules

Set up Supplier Schedules

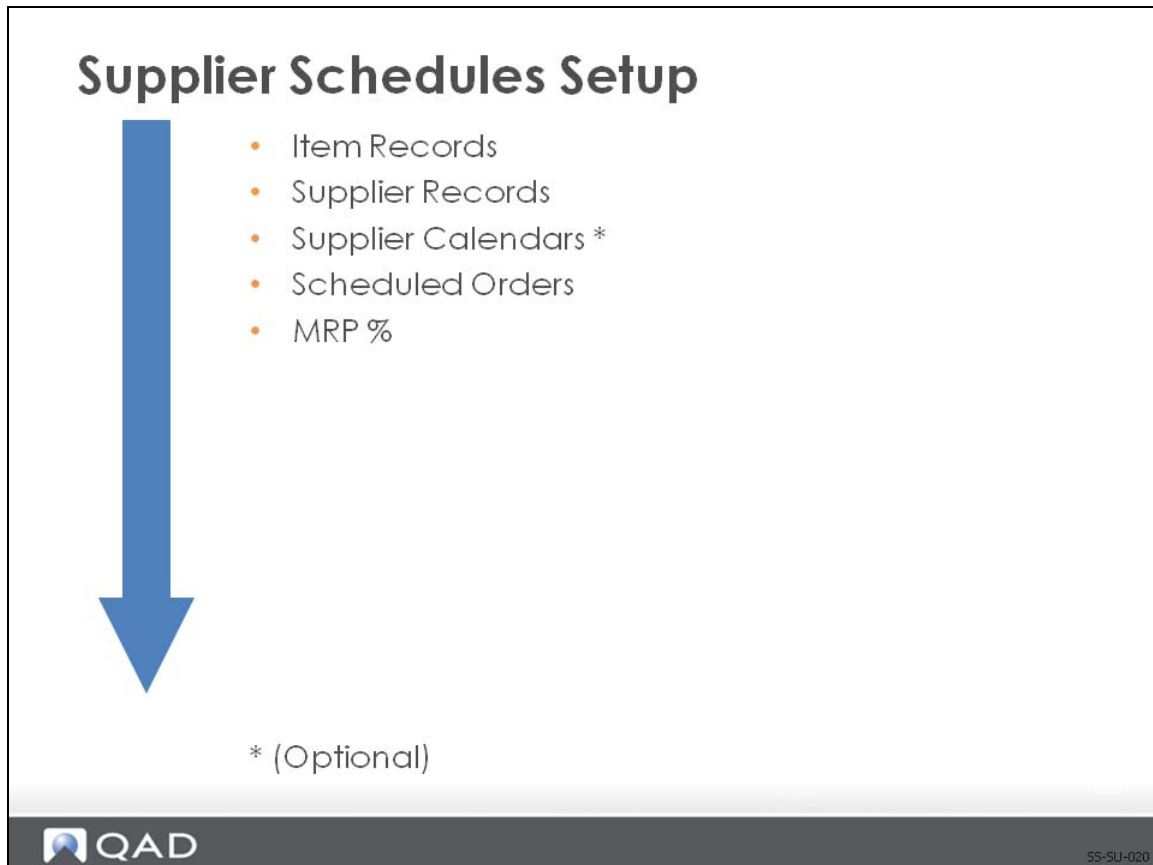

In this section you learn how to:

- ✓ Identify key business considerations before setting up Supplier Schedules in QAD Enterprise Applications
- **Set up Supplier Schedules in QAD Enterprise Applications**
- Process Supplier Schedules in QAD Enterprise Applications
- Process Supplier Schedules Receipts in QAD Enterprise Applications

Supplier Schedule Business Process

Supplier Schedules Setup

This illustration shows the data that needs to be set up for supplier scheduled orders and the typical order in which it is defined.

- Item Records
- Supplier Records
- Supplier Calendars (optional)
- Scheduled Orders
- MRP%

Item Records

Supplier Schedules Setup

- **Item Records**
- Supplier Records
- Supplier Calendars *
- Scheduled Orders
- MRP %

* (Optional)

SS-SU-030

Before creating a scheduled order, item records must exist for all items and products you are purchasing. The Item Master table contains records for all items, regardless of site. Item records hold the default information about items.

MRP uses the item information to create planned purchase orders for scheduled items.

To add item records, use one of the following:

- Item Master Maintenance (1.4.1)
- Item Data Maintenance (1.4.3)

Supplier Item Records

If your supplier uses an item number different from your internal item number, you can set up a cross-reference between the two item numbers. You can also reference the original manufacturer's number.

To add a cross-reference between a supplier item number and your internal item number, use Supplier Item Maintenance (1.19).

Item Master Maintenance

QAD SS-SU-040

Use Item Master Maintenance (1.4.1) to add an item number.

There are four categories of item information (data):

- General
- Inventory
- Planning
- Cost

Exercise: Item Record

Note The data used in these exercises may not be the same as the data shown in the screen captures in this lesson. In an exercise, if a field is not listed, you can accept the default value or leave it blank.

You are going to create a purchase part (item) number.

Use Item Master Maintenance (1.4.1)

- 1 To create the purchased item, enter the following:

Field	Data
Item Number	bx-0001
Description	Carton, 1g

- 2 Advance to the Item Data frame. Enter the following:

Field	Data
Product Line	10
Promo Group	MEDICAL
Item Type	COMP
Status	ACTIVE

- 3 Advance to the Item Inventory Data frame. Enter the following:

Field	Data
Location	100

Record the default site: _____

- 4 Advance to the Item Planning Data frame and enter the following:

Field	Data
Plan Orders	Y
Pur/Mfg	P
Pur LT	1

- 5 Advance to the Item Price Data frame. Enter the following:

Delete Back Next

Reference only

Used if no price list entered on scheduled order

QAD SS-SU-060

When a PO is entered referencing this supplier item, optionally you can update the supplier-item data to reflect the new price if it has changed. Both the quote price and quote date are updated. The quote quantity does not change. You can choose to prevent this update, for example if the price is much higher than normal because of a rush delivery requirement.

Both item numbers print on all communications to the supplier.

Supplier Item Maintenance

Supplier Item Maintenance

Item Number: 02001 [2] Supplier: 10-300 Supplier Item: AUT-10005

SS-SU-070

Note Purchase order item numbers can have a maximum length of 18 characters

- When you set up a supplier item number, you can enter either item number (your internal item number or the supplier item number) on an order
- If you enter the supplier item number, the system automatically substitutes your internal item number

Exercise: Supplier Item

Note The data used in these exercises may not be the same as the data shown in the screen captures in this lesson. In an exercise, if a field is not listed, you can accept the default value or leave it blank.

Your supplier uses their own item number, so you need to set up a cross reference between your internal item number and your supplier's item number. You are also going to create a manufacturer's reference.

- 1 To create the cross-reference, enter the following data. Use Supplier Item Maintenance (1.19)

Field	Data
Item Number	bx-0001
Supplier	10S1003
Supplier Item	Box100

- 2 Advance to the Specification frame. You are now going to create a reference to the original manufacturer and their item number:

Field	Data
Manufacturer	Boxer
Manufacture Item	bx-0001

Supplier Records

Before a supplier schedule can be created, you must have a supplier record for each of your suppliers. This record contains supplier information used by the system.

This information is used in:

- Purchase Orders
- Accounts Payable

Supplier records contain static and control information.

- Static information such as address is used for reporting purposes
- Control information determines how supplier orders and accounts are processed. In Enterprise Edition, much of this information is specified during the Financials setup in Supplier Create.
 - Accounts payable
 - Currency

Supplier Address and Data Frames

Supplier Data Maintenance: Supplier Address and Data Frames

The screenshot shows the 'Supplier Data Maintenance' window for Supplier 10-300. The window is divided into two main sections: 'Supplier Address' and 'Supplier Data'.

QAD Enterprise Applications allows you to set up calendars matching your supplier's work schedule.

- Create when your supplier's work schedule is different from yours
- Maintain a supplier calendar for those suppliers from whom you pick up shipments
- Schedule Update from MRP (5.5.3.1) uses the supplier calendar to calculate shipment dates, back-scheduling requirements if the initial due date is not a work day for the supplier
- If there is no supplier calendar, the system uses your calendar

QAD SS-SU-180

Use Supplier Calendar Maintenance (5.5.1.1) to set up a supplier calendar.

- Useful when a supplier has a work schedule different from your company's work schedule
- Specify your supplier's work days and their hours of operation

Note MRP calculations are not affected by the supplier hours; they are for your information.

Operating Day Hour Exceptions Frame

- Exceptions to the supplier's calendar, such as shutdowns

Non-Operating Days Frame

- Use to define exceptions Holidays
- Access this field by clicking Back

Exercise: Supplier Calendar

Your supplier has a work schedule different from your work location. Therefore, you need to set up a supplier calendar.

Use Supplier Calendar Maintenance (5.5.1.1)

- 1 Supplier 10S1003 operates two shifts Monday through Friday for a total of 16 hours per day. They also operate on Saturday for 4 hours.
- 2 They have a shutdown from July 1 through July 14.

Supplier Scheduled Order Maintenance

Use Supplier Scheduled Order Maintenance (5.5.1.13) to create and maintain scheduled orders. A scheduled order is like a purchase order in that it communicates demand to a supplier and receipts are processed against it. The difference is that each line item has multiple due dates and order quantities.

Note A scheduled order does not have delivery dates or times.

Schedule Bucketing

A spreadsheet used to show resource loadings by time period—typically using monthly buckets.

Exercise: Creating Demand and Scheduled Orders

Note The data used in these exercises may not be the same as the data shown in the screen captures in this lesson. In an exercise, if a field is not listed, you can accept the default value or leave it blank.

You are going to create a forecast for item number bx-0001 using the default site previously given to you. Then you are going to run MRP to create the demand (that is, create the work orders).

- 1 Starting with next week, enter a 12-week forecast, using 100 of item bx-0001 per week.
Use Forecast Maintenance (22.1)
- 2 Run selective MRP for your item number and site, accepting the defaults.
Send the output to your printer. If you do not have a printer, set the output to a file with a name such as “mrp.”
Use Selective Materials Plan (23.3)
- 3 Review the MRP results. You should have some planned work orders (designated WO) on the supply side.
Use Planned Order Browse (23.9), MRP Summary Inquiry (23.13), or MRP Detail Inquiry (23.16)

You are now ready to create the scheduled order for supplier 10S1003.

- 1 You are going to set up the order data for this supplier schedule. Let the system assign the purchase order number.

Record the purchase order number: _____

Use Supplier Scheduled Order Maintenance (5.5.1.13)

- 2 Advance to the Order Data frame and accept all the default information.

Next, you are going to set up the order detail.

- 3 In the Item/Site frame, enter your item number, BX-0001 and ship-to site, 10-100. Let the system assign the line number.

When the system prompts you to copy data from another order line for this item, choose No.

- 4 In the first Order Line Item Data frame, accept the remaining default information.

- 5 In the second Order Line Item data frame, enter the following:

Field	Data
Schedule Days	14
Schedule Weeks	6
Schedule Months	6
Fab Auth Days	30
Raw Auth Days	60
Transport Days	2
Ship Delivery Pattern Code	10 (any day Mon-Fri)

Note Note the defaults of the Supplier Item and Cum Start fields.

- 6 View the scheduled order details. Use Supplier Scheduled Order Inquiry (5.5.1.14) or Scheduled Order Report (5.5.1.15). Set the output to Page.

MRP %

* (Optional)

 QAD SS-SU-300

You need to determine how you want your scheduled requirements to be allocated across suppliers in a multi-sourcing environment. Even with a single source, you still need to determine the allocation.

Note With a single source, you would allocate 100% to the supplier.

Schedule Update from MRP (5.5.3.1) uses these percentages to allocate MRP planned orders for the item among suppliers

Scheduled Order MRP % Maintenance

Scheduled Order MRP % Maintenance

To phase in new percentages,
enter same Ship-To Site and Item
Number with a different Effective date

Use Scheduled Order MRP% Maintenance (5.5.1.17) to distribute supply percentages between suppliers.

Note Use this function when you are phasing out one supplier and replacing them with a new one. You can control the percentages using the start from dates (Effective) while the new supplier takes on more load or finds the required quality levels.

Exercise: Calculating Percentage

You are now ready to calculate the percentage of MRP-planned orders to be scheduled using this supplier schedule.

- 1 Using today's date as your Effective date, enter 100% for your purchase order.
Use Scheduled Order MRP % Maintenance (5.5.1.17).

Chapter 4

Process Supplier Schedules

Process Supplier Schedules

- Review/Modify Schedule Release *
- Transmit Schedule Release

* (Optional)

55-PRO-030

Once you have the MRP demand, you can take the MRP requirements and determine the due dates and quantities for each scheduled order item by supplier. With this information, you are ready to produce a new active schedule release.

- A release is a set of item quantities and requirement dates identified by a release ID number
- The release is what you send to your supplier

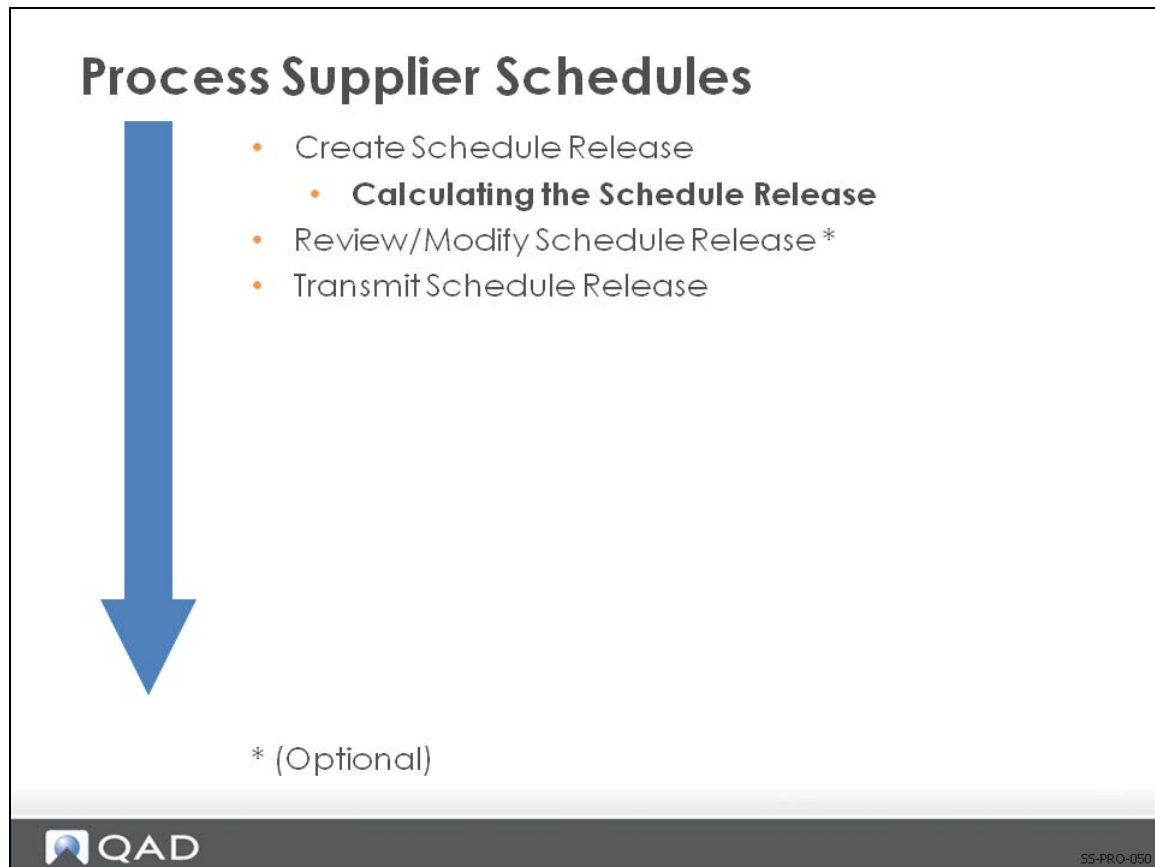

Schedule Update from MRP

Use Schedule Update from MRP (5.5.3.1) to automatically create a new release of a supplier schedule. Select the scheduled orders using one or more of the following:

- Purchase Order (scheduled order)
- Item Number
- Ship-To (receiving site)
- Supplier
- Buyer

To select all, leave the fields blank.

Calculating the Schedule Release

Using the selection criteria you enter, Schedule Update from MRP:

- Locates all planned orders from MRP for the selected items
- Looks at the scheduled order for the supplier and adjusts the quantities and due dates using the scheduled order's parameters

Note These parameters are set in the Order Line Item Data frame of Supplier Scheduled Order Maintenance.

In calculating the schedule release, Schedule Update from MRP performs the following calculations.

- Back-schedules for safety days from planned order due dates
- Back-schedules for ship/delivery pattern from safety day schedule
- Back-schedules for supplier calendar from ship/delivery date
- Distributes the requirements among the suppliers using the percentages specified in Scheduled Order MRP% Maintenance (5.5.1.17)
- Revises net required (open, not scheduled) quantities to standard pack quantity multiples
- Displays any unfulfilled prior cumulative requirements
- Creates the release and assigns a Release ID

Note In Supplier Schedule Control (5.5.1.24), if Generate Date Based Release ID is set to Yes, a newly created release gets a release number with a format of YYYYMMDD-nnn; otherwise, it gets the usual 6-digit serial number.

- Determines whether quantities are firm (within the Firm Days time fence) or planned
- Displays fabrication and raw authorization quantities and the start and end dates

Note Each time you run Schedule Update from MRP, all or part of the schedule is replaced depending on the Firm Days field value.

Planning Horizons - Firm Days

The setting of the Firm Days field in Supplier Scheduled Order Maintenance (5.5.1.13) affects the calculation of the schedule release. Because you are sending order quantities and planning data to your supplier, you define requirements as either firmed or planned quantities. You can send all firm, all planned, or some of both types of requirements. The value of the Firm Days field for the scheduled order line item defines the time fence and consequently determines the order status.

Schedule Update from MRP automatically applies firm status to any requirements falling within the time fence set by the Firm Days field. All planned orders outside this time fence are approved, but maintained as planned requirements. In other words, they are not seen by MRP as sources of supply and can be replanned.

When creating a new schedule release, Schedule Update from MRP checks for an active schedule release with unreceived firm requirements. If one exists:

- The firm requirements are carried forward to the new release
- Firm requirements prior to the beginning date of the new schedule release (as of date) are maintained as prior cumulative requirements (Prior Cum Req)
- Accesses MRP planned order information and adds it to the new schedule release, starting one day after the end of the firm time period of the old schedule release
- Firms any planned orders falling within the Firm Days time fence

When MRP is run again, it plans or replans orders for scheduled requirements that are now within its planning horizon. Once a schedule is created with firm data in it, MRP does not generate planned requirements with dates falling within the Firm Days time fence of the schedule release. However, if demand increases or decreases, the following occurs:

- If increased demands create additional requirements within the Firm Days time fence, MRP creates planned orders in that time period
- When you regenerate the schedule release, the system does not select any planned orders falling within the Firm Days time fence covered by a schedule
 - The warning message `Order not selected` displays
- If decreased demand decreases requirements, MRP sees the supply as excessive and produces action messages
 - Action messages recommend what action a master scheduler should take to balance supply and demand

You can set the Firm Days field to a positive value or zero (0).

When Firm Days is a positive value, Schedule Update from MRP:

- Generates firm requirements for a new schedule release
- Carries forward outstanding firm requirements to new schedule releases
 - Firm requirements are visible to MRP as scheduled supply

When Firm Days is set to Zero (0), Schedule Update from MRP does not:

- Generate firm requirements for a new schedule release
- Carry forward any requirements from previous schedule releases

If 0, the update process generates each new schedule release from MRP planned data.

- All data is designated as planned
- Data designated as planned is not visible to MRP

The update process sets the prior cumulative requirements (Prior Cum Req) to the current value of the cumulative received (Cum Received). If any planned order has a requirement date falling before the beginning date of the schedule release, it is added to the prior cumulative requirements.

Note To avoid schedule discrepancies between printed bucketed schedules and the actual required schedule, firm days should never exceed the number of days specified in the Schedule Days field set in Supplier Scheduled Order Maintenance.

Exercise: Create Schedule Release

Create a schedule release for your scheduled order.

Use Schedule Update from MRP (5.5.3.1).

- 1 Using your scheduled order number, run the update. Let the As of Date default to the system date.

Field	Data
Report Detail/Summary	Detail
Print Exceptions Only	No
Update	Yes

- 2 Send the output to Page.
- 3 Review the output, taking note of the calculation steps.

Review/Modify Schedule Release

Process Supplier Schedules

- ✓ Create Schedule Release

* (Optional)

 QAD 55-PRO-080

There may be times when you need to modify a scheduled order release or simply want to review the release data. For example, if the requirements change in a release, you will need to manually adjust the firm quantities. You can change release data such as:

- Requirement dates
- Quantities
- Firmed or planned status
- Fab and raw authorization quantities and dates

Schedule Maintenance

Use Schedule Maintenance (5.5.3.3) to modify or review a scheduled order release. You can also use Schedule Maintenance to reactivate a schedule release or to create schedule releases manually.

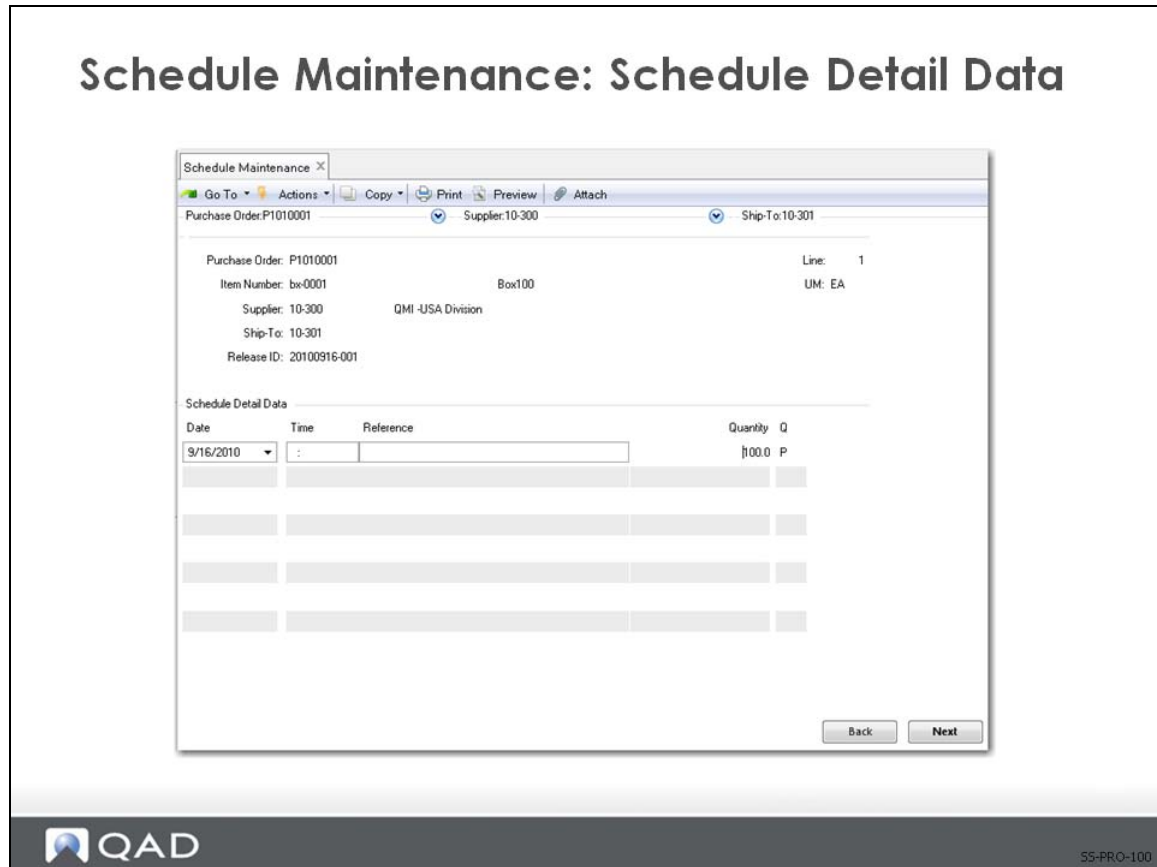

There are four frames of data.

Header Frames

There are two header frames. The first header frame identifies the scheduled order release you want to see. To select the most current release, press Enter on the Release ID field.

In the second header frame you specify the prior cumulative date and the active start date.

Schedule Detail Data Frame

The third frame displays the dates, quantities, and status of individual lines in the release. If you need to alter this information, you do so in this frame.

If you needed to create a manual schedule release, you would enter the information here. For example, if you are just starting a product up and the planning parameters are not yet set, but the item has a significant lead time.

Resource Authorization Data Frame

Schedule Maintenance: Resource Authorization Data

Purchase Order: P1010001 Supplier: 10-300 Ship-To: 10-301

QAD SS-PRO-110

This frame shows the fabrication and raw materials amounts and dates.

- Defaults from the scheduled order created in Supplier Scheduled Order Maintenance (5.5.1.13)
- Changes made to this information affect this release only

Note If you are manually creating a release, after this frame you are prompted to make this release active.

Exercise: Review Schedule Release

Review the schedule release you just created.

- 1 Use Schedule Maintenance (5.5.3.3) to bring up your schedule release. Use the lookup icon to find your purchase order. Press Enter to access the current Release ID.
- 2 Go through each frame, reviewing your schedule order details. Make sure that what you see is what you expected.

Transmit Schedule Release

Process Supplier Schedules

- ✓ Create Schedule Release
- ✓ Review/Modify Schedule Release *
- **Transmit Schedule Release**

* (Optional)

 QAD 55-PRO-130

Scheduled releases can be transmitted in a variety of ways. The appropriate defaults in Trading Partner Parameters Maintenance (35.13.10) must be set up. The value you set up there defaults to the scheduled order—Supplier Scheduled Order Maintenance (5.5.1.13), where you can accept the default or override it.

Schedule Print

Use Schedule Print (5.5.3.8) to print the schedule release. Schedule releases can be printed individually or in batch mode. You have the option of printing schedule releases having zero (no) requirements. The printed schedule release shows the order's long-range requirements, detailed by dates and quantities. It has two sections:

- Header section
- Line item section

The header section identifies the release ID, contains supplier and ship-to information, and general information about the release. It also shows:

- Release date
- In transit quantity
- Receipt date and receipt quantity
- Cumulative received quantity
- Shipper ID
- Ship/delivery pattern

The line item section shows the order detail information for each scheduled requirement. Information such as:

- Ship or delivery interval
- Ship or delivery date

- Ship or delivery time
- Required quantity: The discrete or bucketed quantity for the scheduled line
- Cumulative required quantity: Total cumulative requirement including the line quantity, for the entire life of the order
- Net required quantity: Total open quantity including the line quantity

Exercise: Print Schedule Release

View your schedule release. Review the information. Use Schedule Print (5.5.3.8); set the output to Page.

- You have the option of including schedule releases having zero requirements

Chapter 5

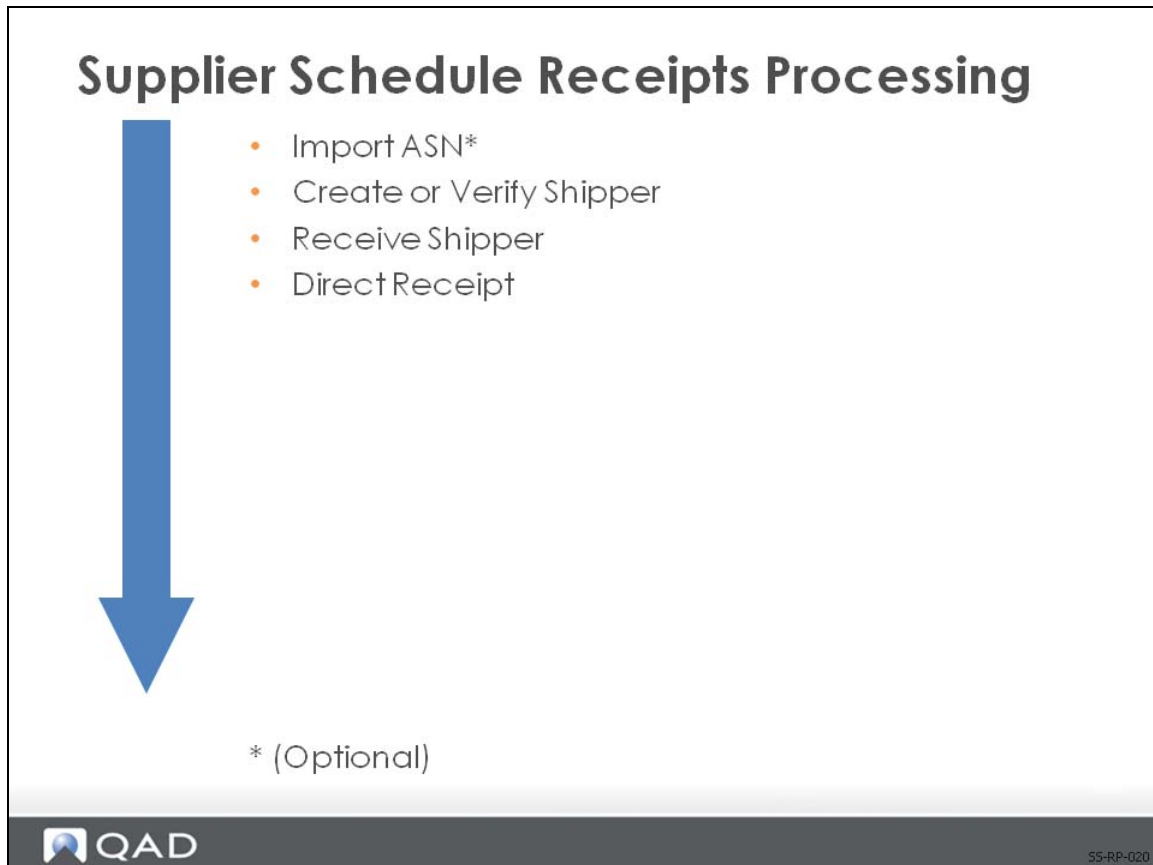

Supplier Schedule Receipt Processing

Process Supplier Schedules Receipts

In this section you learn how to:

- ✓ Identify key business considerations before setting up Supplier Schedules in QAD Enterprise Applications
- ✓ Set up Supplier Schedules in QAD Enterprise Applications
- ✓ Process Supplier Schedules in QAD Enterprise Applications
- **Process Supplier Schedules Receipts in QAD Enterprise Applications**

Process Supplier Schedule Receipts

This slide shows the typical order for processing supplier schedule receipts:

- 1 Import ASN (Optional).
- 2 Create or verify shipper.
- 3 Receive shipper.
- 4 Direct receipt.

Receipt Processing

How you receive items against your scheduled release depends on the relationship you have set up with your supplier. You can receive notification of the shipment by:

- ASN
 - ANSI ASC X12 856 document, defined by an ASN number
 - Transmitted when a shipment leaves the supplier's shipping dock
 - Provides you with advanced notice of the items just shipped
 - Can represent multiple items over multiple orders
- Packing list
 - Send with the shipment

- Identified by a Shipper ID
- Shows quantities and items
- Shipping labels
 - Bar code labels affixed to each shipment container and container group
- Invoice
 - Shows quantities and items detail by order, with extended pricing

Once you receive notification of the shipment, you have three ways to process/receive the shipment:

- Import, verify, receive, and confirm the ASN
- Manually create, receive, and confirm a shipper
- Direct receipt using the Purchasing module

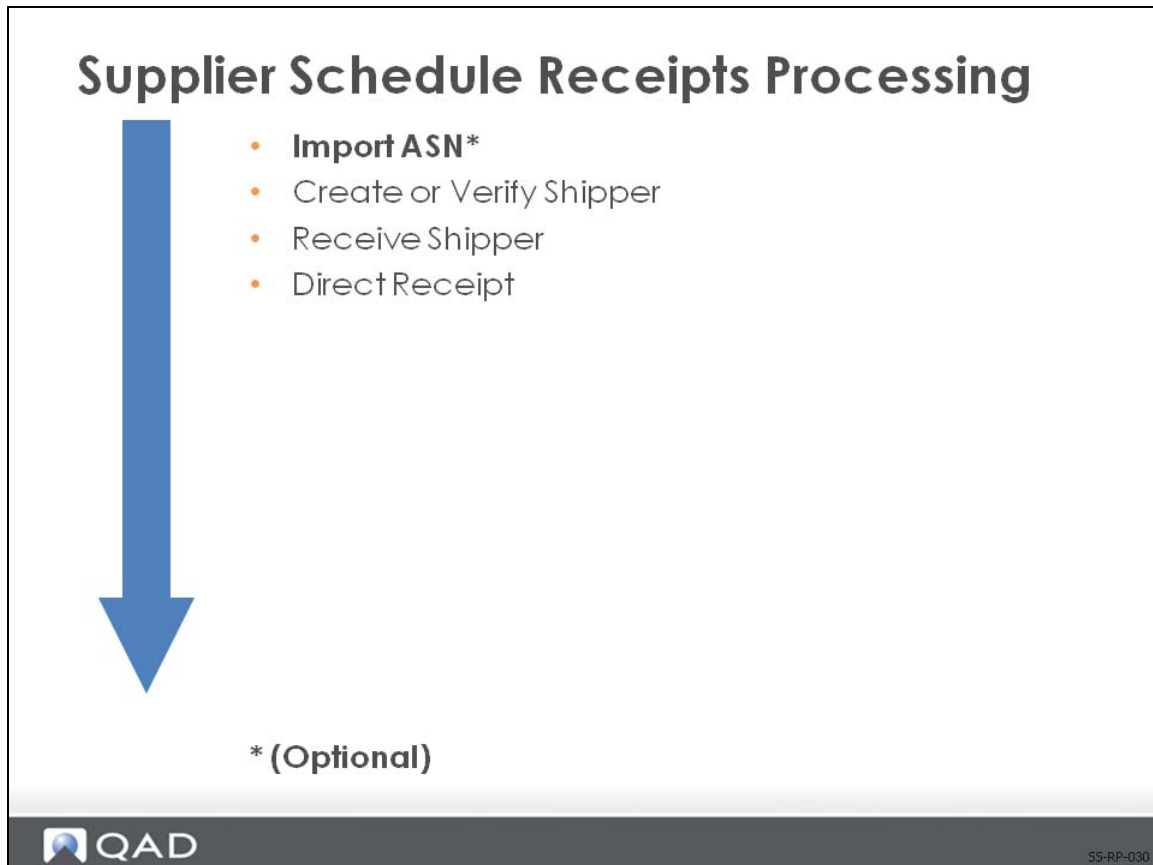

The receiving process begins with the arrival of either an ASN, signifying a shipment is on the way, or by the actual shipment and accompanying documentation. The first step is to record or verify the shipment data such as shipment ID, items in the shipment, quantities, costs, and sometimes containers.

If receipt was by way of an ASN, the information will be in your system after importing the ASN. You can verify the shipment data before you receive and confirm the shipment. If your supplier did not send an ASN, you will need to enter the shipment data into the system to create a shipper.

Once the shipment data is in the system, you then receive and confirm the shipper. This updates three history records:

- Purchase receipts
- Inventory transactions
- Inventory GL costs

Import ASN

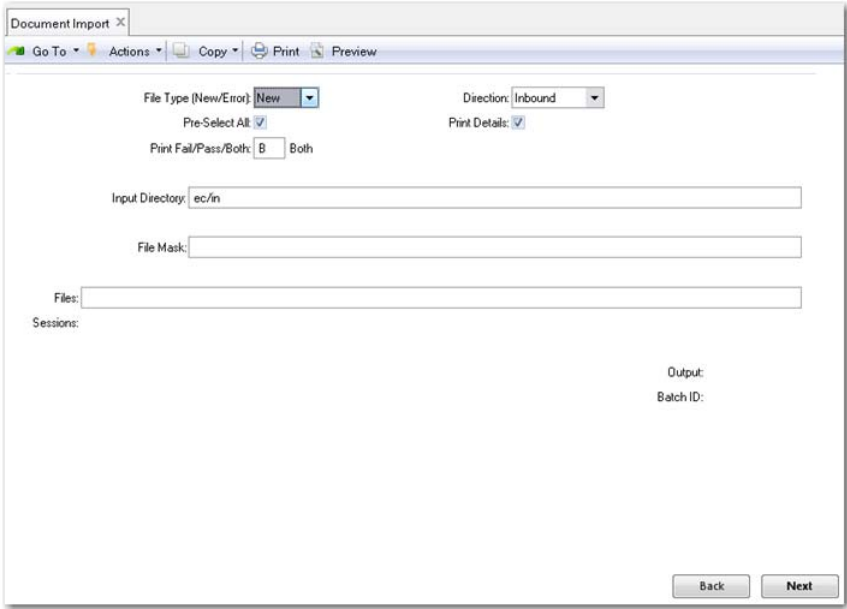

Frequently an ASN is sent using EDI as soon as the shipment leaves the supplier's shipping dock.

Some suppliers transmit only an ASN. You then treat the ASN as the receiving document and the invoice. Each ASN is identified by an ASN number. This number acts as the shipper number and the invoice number.

Note Before you can import from a supplier, you need to set up the supplier in Trading Partner Parameters Maintenance (35.13.10).

Document Import

The screenshot shows a software window titled "Document Import" with a standard menu bar (Go To, Actions, Copy, Print, Preview). The window contains several configuration fields:

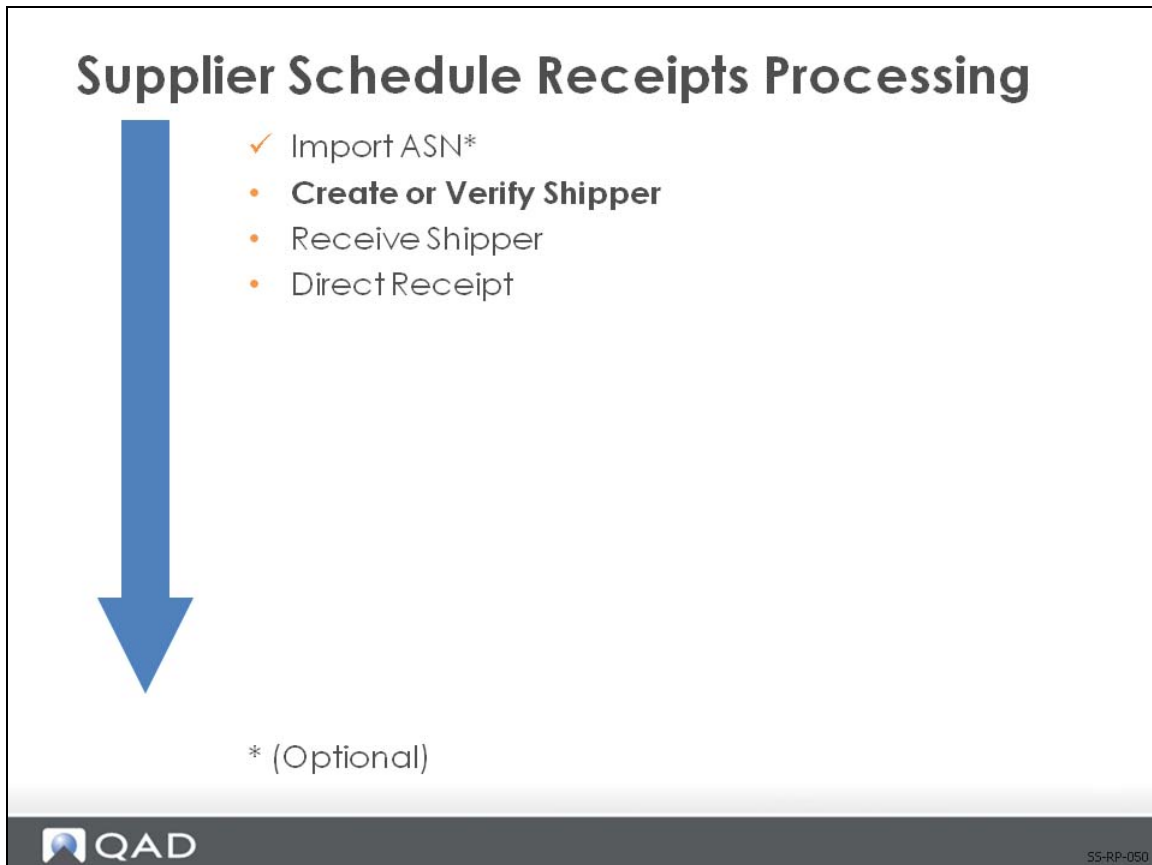

- File Type (New/Error):** A dropdown menu set to "New".
- Direction:** A dropdown menu set to "Inbound".
- Pre-Select All:** A checked checkbox.
- Print Details:** A checked checkbox.
- Print Fail/Pass/Both:** Radio buttons with "Both" selected.
- Input Directory:** A text field containing "ec/in".
- File Mask:** An empty text field.
- Files:** An empty text field.
- Sessions:** An empty text field.
- Output:** A label with "Batch ID:" below it.

At the bottom right of the window are "Back" and "Next" buttons. The QAD logo is visible in the bottom left corner of the overall image, and the text "SS-PP-040" is in the bottom right corner.

Use Document Import (35.1) to import the ASN. Document Import locates and opens EDI-transmitted documents, in this case the ASN. It then takes the data and converts it into a data format able to be recognized by QAD Enterprise Applications. The ASN is then ready to be processed.

The system generates a report on the import process.

Create or Verify Shipper

You can create a shipper using the documentation accompanying the shipment. A shipper itemizes the items and quantities in the shipment. Sometimes you also need to track the shipping containers.

You can receive container information electronically as part of an ASN or the information may arrive with the shipment and be entered manually. Container information may also be scanned into the system from bar code readings of shipping labels.

PO Shipper Maintenance

Use PO Shipper Maintenance (5.5.5.5) to create a new shipper, to modify, or simply to view an existing shipper. If using ASNs, you can use PO Shipper Maintenance to see and verify the shipment details before you receive and confirm it.

Note You can modify a shipper that has been confirmed. However, you cannot reconfirm modified shippers.

Header Frames

You identify the shipper by entering the supplier code, a shipper ID, and a ship date. The shipper ID can come from:

- ASN already in the system
- Bar code reading of a shipping label
- Entering the number from the receiving document (picklist)

In the second header frame you enter the site where the shipment is being delivered in the Ship-To field.

Contents (Items) Frame

PO Shipper Maintenance: Contents (Items) Frame

PO Shipper Maintenance

Supplier: 10-300 Ship Date: 9/16/2010 QMI -USA Division
 Shipper ID: 200 30 Ridgedale Avenue

Ship-to ID: 10-301 Distribution Site 1

Contents (Items)

Item Number: bx-0001

Site:

Location:

Lot/Serial:

Reference:

Supplier Lot:
 Multi Entry:

QAD SS-PP-070

If you are tracking the shipping containers, enter the container ID.

In this frame you register/record the items that are packed into the shipper or containers.

PO Container Maintenance

Use PO Container Maintenance (5.5.5.4) to link items to containers used by your supplier to ship the items. Containers are not a required part of a shipper, but there are times when you need to keep track of them, if the container has a significant value, for example, or if it needs to be returned. You can also use PO Container Maintenance to modify container item quantities (for example, if the actual shipment does not match the shipper).

Note Usually containers are not a concern with supplier schedules.

You can receive container information:

- Electronically as part of an ASN
- Along with the shipment (for example, a packing list) to be entered manually
- From bar code readings of shipping labels

Note To return containers that have been received to a shipper, use Issues – Unplanned (3.7).

In the first frame you identify the supplier and assign a container ID. You can have the system assign a container ID or you can enter one.

The container you are identifying at this point is the parent container, the container holding the shipped items. In some cases this can also include other containers.

In the next frame you identify the ship-to location: the location where the container is being delivered. In the last frame you enter the container item information.

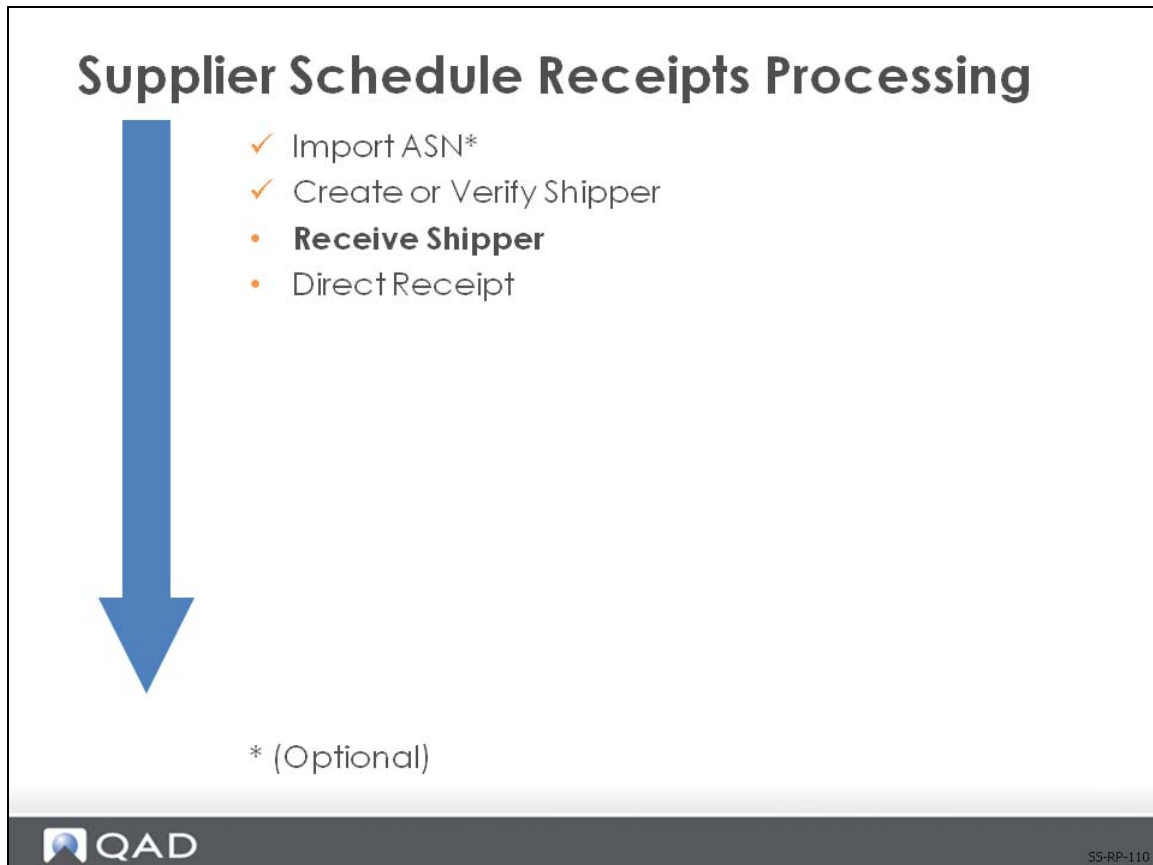

Exercise: Receiving the Supplier Schedule

Receive the first shipment on your schedule order.

- 1 Enter your supplier. Use 100 for the Shipper ID and today's date for the Ship Date. Click next and enter 10-100 for the Ship-to ID.
Use PO Shipper Maintenance (5.5.5.5)
- 2 Advance to the Contents (Items) frame. From the Container Frame click Back to advance to the contents (Items) frame. Receive a quantity of 100.

Note This activity sets up the shipper to be received; the actual receipt occurs in the next activity.

Receive Shipper

The last step in the receiving process is to receive and confirm the shipper.

Receiving the shipper:

- Increases inventory
- Increases the cumulative received quantities
- Decreases net cumulative requirements
- Updates the accounts payable (AP) and GL accounts

PO Shipper Receipt

QAD 55-RP-120

Use PO Shipper Receipt (5.5.5.11) to record that the supplier has fulfilled all or part of their commitment by delivering the ordered materials.

Exercise: Receive Shipper

Receive and confirm the shipper and check inventory.

- 1 You are going to receive and confirm the shipper. Let the Effective date default to today's date. Use PO Shipper Receipt (5.5.5.11)
- 2 When the system prompts, confirm the update.
- 3 Print another copy of your schedule, this time take note of any differences. Use Schedule Print (5.5.3.8)
- 4 Check to see if your item number has been received into inventory. Use Inventory Detail by Item Browse (3.2) or Inventory Detail by Site Browse (3.3)
- 5 Review the audit trail for the inventory transaction. Use Transactions Detail Inquiry (3.21.1)

Special Processes

Managing Cumulative Quantities

Managing Cumulative Quantities

QAD Enterprise Applications gives you the ability to:

- Modify cumulative receipt quantities for a scheduled order
- Reset an entire scheduled order with a new cumulative start date and zero quantity
- Reset the cumulative totals for one or more supplier schedules

SS-SPPR-010

Cumulative Received Maintenance

Use Cumulative Received Maintenance (5.5.5.13) to modify cumulative received quantity for the supplier schedule line or reset an entire scheduled order with a new Cum Start date and a zero (0) quantity.

Note New cumulative quantity is transmitted on the next schedule release.

There are two frames.

In the first frame you select the scheduled order by specifying the:

- Purchase Order (scheduled order number)
- Item
- Supplier
- Ship-To
- Line
- In the second frame you designate how you want to modify the cumulative received quantity.

Note It is recommended that this program be password-controlled.

Cumulative Received Reset to Zero

Cum Received Reset to Zero

Use Cum Received Reset to Zero (5.5.5.14) to reset the cumulative totals for supplier schedules. You can reset one supplier schedule or a range of supplier schedules. The reset process generates a report showing which scheduled orders were reset and what their cumulative received totals were before being reset.

Note You can run the reset process in batch mode.

Appendix A

Workshops and Study Questions

Supplier Schedules Setup Workshop

Situation:

You operate a company that makes juice drinks. One of the products that you purchase are the bottles for the drinks. For this product you have two suppliers.

- 1 Select two suppliers.
Record the supplier codes: _____
What program do you use to create the suppliers?
- 2 Create a purchase part number for the bottles.
Record the site: _____
What program do you use to create the part? What field tells the system it is a purchased part?
- 3 Set up supplier item numbers for your item numbers.
Record the supplier item number: _____
What program do you use?
- 4 Set up a price list for each of your suppliers
Make the price list code the same as the supplier codes.
Which program do you use for this?
- 5 Add the price list code to the supplier information.
What program do you use to do this? Which field?
- 6 Set up a calendar for each of your suppliers. Make one supplier have every Friday as a non-work day and the other one have every Wednesday as a non-work day. How do you indicate a non-work day?
- 7 Set up a scheduled order for each supplier.
 - a Record each order number: _____
 - b Accept the defaults in the Order Data frame. You want to be able to print the schedules. What field do you have to check?
 - c In the first Order Line Item Data frame, enter the price list code. Accept the remaining defaults.
 - d In the second Order Line Item Data frame enter the following:

Field	Data
Firm Days:	0
Schedule Days:	14
Schedule Weeks:	6
Schedule Months:	6
Fab Auth Days:	30
Raw Auth Days:	60

Field	Data
Ship/Dlvy Pattern:	20
Standard Pack Qty:	<different for each supplier>

What program do you use and what field must be set to Yes?

- 8 Input a 16 week forecast for the item, starting next week. Be imaginative with your numbers. What program do you use?
- 9 Run selective MRP for your item number and site. Accept the defaults. What program do you use?
- 10 Where can you check the results? What type of orders should you see?
- 11 The scheduled order is to be shared between your two suppliers. How do you set this up?

Supplier Schedules Setup Study Questions

- 1 You can use any type of price list for supplier schedules.
True or False
- 2 One of your suppliers shuts down for two weeks every summer. What do you have to do to make sure no orders are scheduled during that two week period?
- 3 You need to set up a supplier calendar for each of your suppliers.
True or False
- 4 If you are ordering more than one item from the same supplier, you need to set up a scheduled order for each item.
True or False
- 5 You want to make sure the orders are shipped in multiples of 25. What do you have to set?
- 6 Since you only have one supplier, you do not need to allocate supply percentages in Scheduled Order MRP% Maintenance.
True or False

Processing Supplier Schedules Workshop

Situation:

You have your MRP-planned purchase orders and are now ready to create the release.

- 1 Create a new supplier schedule release.
What program do you use?
- 2 Review the schedule release. What can you use to do this?
- 3 Print a copy of the schedule release.
What program do you use?

- 4 How does the standard pack quantity affect the orders?

Scheduled Order Processing Study Questions

- 1 List the ways you can transmit a schedule release to your supplier.
- 2 If you are exporting your schedule release, what information do you need to set up before you can export the release?
- 3 You can transmit the schedule release using more than one method.
True or False

Receiving Supplier Schedules Workshop

Situation:

The shipments from both suppliers have arrived and need to be received into inventory.

- 1 Receive each shipment separately using the direct receiving method.
What program do you use?
- 2 Print a copy of the schedule release.
What program do you use?
- 3 Compare this copy to the copy you printed at the time of processing. What is different?
Check the header information.

Receiving Supplier Schedules Study Questions

- 1 List the ways you can receive notification from your supplier that they have shipped your order.
- 2 List the ways you can process the shipment.

Supplier Schedules Setup Workshop: Answers

- 1 Basic address information comes from the Financials setup; use Supplier Data Maintenance (2.3.1) to specify additional details.
- 2 Use Item Master Maintenance (1.4.1), the Pur/Mfg field.
- 3 Use Supplier Item Maintenance (1.19).
- 4 Use Price List Maintenance (1.10.2.1).
- 5 Use Supplier Data Maintenance (2.3.1). Enter the price code in the Supplier Pricing Data frame, Disc Tbl field.
- 6 Use Supplier Calendar Maintenance (5.5.1.1). Set the weekday in question to No under Work Day and 0 under Hours.
- 7 Use Supplier Scheduled Order Maintenance (5.5.1.13).

Print Schedules must be set to Yes.

- 8 Use Forecast Maintenance (22.1).
- 9 Use Selective Materials Plan (22.3).
- 10 Use MRP Summary Inquiry (22.13) or MRP Detail Inquiry (23.16). You should see planned orders (designated as work orders).
- 11 Use Scheduled Order MRP% Maintenance (5.5.1.17). Assign a percentage to each order.

Supplier Schedules Setup Study Questions: Answers

- 1 False. Price tables (type L) are not used for supplier schedules.
- 2 Set up a supplier calendar using Supplier Calendar Maintenance (5.5.1.1). In the Operating Day Hour Exceptions frame, define the beginning and ending dates of the shut down period.
- 3 False. If a supplier calendar is not set up, the system uses your shop calendar.
- 4 False. You can use the same scheduled order, just add a line item for each item you are ordering from the supplier.
- 5 You need to set the Std Pack Qty (Standard Pack Quantity) field in Supplier Scheduled Order Maintenance (5.5.1.13). To ship in multiples of 25, you set the field to 25.
- 6 False. Allocate 100% to the order.

Processing Supplier Schedules Workshop

- 1 Use Schedule Update from MRP (5.5.3.1).
- 2 Use Schedule Maintenance (5.5.3.3) or Schedule Inquiry (5.5.3.4).
- 3 Use Schedule Print (5.5.3.8.)
- 4 Open quantities are adjusted accordingly.

Scheduled Order Processing Study Questions: Answers

1

- a Printing and sending a hard copy
- b Faxing
- c Exporting

2 You need to set up the trading partner (your supplier) information in Trading Partner Parameters Maintenance (35.13.10.)

3 True. As long as the appropriate parameters are set.

Receiving Supplier Schedules Workshop: Answers

1 Use Purchase Order Receipts (5.13.1).

2 Use Schedule Print (5.5.3.8).

3 The Receipt Date, Receipt Qty, and Cum Received fields show the results of the receive transaction.

Receiving Supplier Schedules Study Questions: Answers

1

- a ASN.
- b The actual shipment and accompanying documents.

2

- a Import, verify, and confirm the ASN.
- b Create and confirm the shipper.
- c Direct receipt.

Appendix B

Reports, Inquiries, Browsers

Supplier Schedules Inquiries and Browsers

Menu	Inquiry	Function / Purpose
5.5.1.2	Supplier Calendar	Browse Displays information for all suppliers having a custom calendar. Shown are the work day hours for Sunday through Saturday.
5.5.1.14	Scheduled Order Inquiry	Displays information by scheduled order line item. Information shown includes order data and order line item data information.
5.5.1.18	Scheduled Order MRP% Browse	Displays information for all ship-to locations. Information shown includes the item number, effective date, purchase order number, and percent allocated.
5.5.3.4	Schedule Inquiry	Displays information by scheduled order. You have the option of displaying the net required quantity for the scheduled order. Information shown includes Prior Cum Req, Prior Cum Date, and the Schedule Detail Data.
5.5.3.5	Schedule History Inquiry	Displays information by scheduled order. You have the option of specifying a Created After date. Only scheduled orders created after this date display. Information shown is the same as in Schedule Inquiry.
5.5.5.6	PO Shipper/Container Inquiry	Displays information by supplier and shipper/container ID. Information shown includes the ship-to, identification number, site, item number, location, order number, line number, and the quantity received.
23.13	MRP Summary Inquiry	Displays information by item number and site. Information shown includes the item's item planning data, and due date and quantity information for gross requirements, scheduled receipts, projected quantity on hand (QOH), planned orders due, and planned orders released.
23.16	MRP Detail Inquiry	Displays information by item number and site. Information shown includes the item's item planning data, and due date, gross requirements, scheduled receipts, projected QOH, planned orders, and order details (work order number, release date).

Supplier Schedule Reports

Menu	Inquiry	Function / Purpose
5.5.1.15	Scheduled Order Report	Selection criteria includes supplier scheduled order details (order number, item number, supplier, ship-to). Report information includes scheduled order data and order line item data. The format of the report is the same as the screen format of Supplier Scheduled Order Maint (5.5.1.13), where the data was originally entered.
5.5.3.13	Schedule Report	Selection criteria includes supplier scheduled order details (order number, item number, supplier, ship-to, release ID). You have the option of receiving information for active or historical schedules. Report information includes Prior Cum Req, Prior Cum Date, Schedule Detail Data, and Resource Authorization Data.
5.5.3.15	Schedule Comparative	Selection criteria includes order number, item number, supplier, ship-to, and two release IDs. The report compares the quantities, discrete and cumulative, between the two specified releases.
5.5.3.17	Schedule Authorization Report	Selection criteria includes supplier scheduled order details (order number, item number, supplier, ship-to). Report information includes release ID number, effective dates, and resource authorization information.
5.5.5.1	Schedule Summary Report	Selection criteria includes supplier scheduled order details (order number, item number, supplier, ship-to). Report information includes due dates, workdays, net quantity due, and cumulative quantity due.
5.5.5.15	Receipt History Report	Selection criteria includes supplier scheduled order details (order number, item number, supplier, ship-to). Report information includes receipt date and time, transaction type and number, site, location, receipt quantity, and cumulative quantity.
