Change Summary

The following table summarizes significant differences between this document and previous versions.

Date/Version	Description	Reference
June 2014/2014 SE	Rebranded for QAD 2014 SE	--
June 2013/2013 SE	Updated for QAD 2013 SE	--
June 2012/2012 SE	Updated for QAD 2012 SE	--

About This Guide

Introduction 2

How This Book Is Organized 2

Symbols and Conventions 3

Introduction

This book is intended for system administrators and programmers doing software conversions and custom programming.

How This Book Is Organized

Database tables are grouped by module and listed alphabetically, with the following information.

abd_det Asset Book Detail

Field Name	Field Label	Column Label	Format	Dec
abd_active	Active	Act	yes/no	
abd_asset	Asset		x(12)	
abd_bonus	Bonus Percent	Bonus %	->>9.9<%	10

- *Field Name*. The name of the field.
- *Field Label*. The label as it appears on screens.
- *Column Label*. The label that appears on reports.
- *Format*. How, and what kind of, data can be displayed.
- *Dec*. The maximum number of decimal places that can be stored.

Some fields in the database are not currently used. These fields are either:

- User definable for custom programming
- Reserved for future use by QAD
- Obsolete (only used in earlier versions)

Each database table has at least one index. By default, Progress sorts and retrieves records using the primary index, which is indicated by an asterisk (*). Indexes have the following attributes.

Index Name	Uni	Field Name	Asc	Abbr
abd_active	yes	abd_active	yes	no
		abd_asset	yes	no
		abd_book	yes	no
* abd_asset	yes	abd_asset	yes	no
		abd_book	yes	no

- *Primary Index*. Indicated with an asterisk. The most frequently used index. Each table has one and only one primary index. Progress uses the primary index when retrieving records or ordering records for a list (like a report) if you don't specify another index. The primary index reflects the most common order, or the most natural order, by which records are sorted.
- *Index Name*. The name of the index.
- *Uni (Unique)*. Yes indicates only one record in the table can have a particular index value.
- *Field Name*. Each index has one or more field components.
- *Asc (Ascending)*. Yes indicates that records are ordered and accessed by ascending field values.
- *Abbr (Abbreviated)*. For character data fields, a sort option that examines partial records. Tables with abbreviated indexes sort faster but require more disk space.

Symbols and Conventions

The following symbols are used in this book.

Symbol	Meaning
*	Primary Index
!	Shows where a column label wraps to next line

The following conventions are used in this book.

Convention for Designating Fields	Meaning
[x]	Extent of array field
<prefix>__user<number>	User field (ac__user1)
<prefix>__dec<number>	User decimal data field (ac__dec01)
<prefix>__chr<number>	User character field (ac__chr01)
<prefix>__qad<number>	QAD reserved field (ac__qad01)
<prefix>_x<number>	Obsolete field (ac_xctr)

Database Definitions

The following pages contain an alphabetical listing of database definitions used in QAD Enterprise Applications Standard Edition.

Product Information Resources

QAD offers a number of online resources to help you get more information about using QAD products.

[QAD Forums \(community.qad.com\)](https://community.qad.com)

Ask questions and share information with other members of the user community, including QAD experts.

[QAD Knowledgebase \(knowledgebase.qad.com\)*](https://knowledgebase.qad.com)

Search for answers, tips, or solutions related to any QAD product or topic.

[QAD Document Library \(www.qad.com/documentlibrary\)](https://www.qad.com/documentlibrary)

Get browser-based access to user guides, release notes, training guides, and so on; use powerful search features to find the document you want, then read online, or download and print PDF.

[QAD Learning Center \(learning.qad.com\)*](https://learning.qad.com)

Visit QAD's one-stop destination for all courses and training materials.
