Database Definitions 5

AAA_gadfinance_20101216	DB Time Stamp	6
abscd_det	Sales Order Detail Container Charges.....	6
absc_det	Shipment Carrier Detail	7
absd_det	Shipment Line Item Detail	7
absi_mstr	Shipper Information Master	7
absl_det	Shipment Detail Line Charges.....	8
abspli_ref	Purchase Order Shipper/Invoice Cross Reference	9
absp_det	Subshipper PO Cross Reference	9
absr_det	Shipment Requirement Detail	9
abssc_det	Shipper Validation Error Log	10
abss_det	Shipment Sequence Detail.....	11
absw_det	ABS Lot/Serial Detail.....	12
absx_det	Subcontract Shipper PO Shipper Cross Reference	13
abs_mstr	ASN/BOL/Shipper Master	13
AcctIF	Chinese Accounting Interface	16
AcctIFFilter	Chinese Accounting Interface Filter	16
acdf_mstr	Account Default Master	17
acd_det	Account Total Detail	17
acm_mstr	Co-product/By-product Average Cost Master	18
acod_mstr	Application Code Master	19
actf_mstr	Info on table and related account, sub-account, & cc field names	19
act_mstr	Alternate Container Master	20
acx_mstr	Account Cross-Reference Master	21
ac_mstr	Account Master	21
adc_ctrl	Address Control.....	22
Address	Address	22
AddressType	Address Type	24
adx_det	External Address Cross-Reference Detail.....	25
Agent	Salesperson	25
AIMW	Warehousing Work Table.....	26
ald_det	Allocation Account Detail.....	27
AlgoAssD	Warehousing Algorithm Assignment Detail.....	27
AlgoAssM	Warehousing Algorithm Assignment Master	28
AlgoM	Warehousing Algorithm Master	29
AlgoTypeM	Warehousing Algorithm Type Master	30
Allocation	Allocation Definition.....	31
AllocationBatch	Allocation Batch.....	32
AllocationBatchLine	Allocation Batch Line.....	32
AllocationLayer	Allocation Layer	32
AllocationPosting	Allocation Posting.....	33

AllocationProportional	Proportional Allocation	33
alm_mstr	Automatic Lot Master	34
AltCOAGroup	Alternate COA Group	34
AltCOAStruct	Alternate COA Structure.....	35
AltCOAStructDet	Alternate COA	36
AltTaskM	Warehousing Alternate Task Master	37
AltUMD	Warehousing Alternate Unit of Measure Detail	38
AltUMM	Warehousing Alternate Unit of Measure Master	38
al_mstr	Allocation Account Master.....	39
anl_det	Analysis Code Link Detail.....	40
ans_det	Analysis Code Selection Detail	40
anx_det	Analysis Code Exploded Detail	40
an_mstr	Analysis Code Master	41
apc_ctrl	Accounts Payable Control.....	41
APMatching	Accounts Payable Matching	42
APmatchingLn	Accounts Payable Matching Line	44
APMatchingLnRevTax	Accounts Payable Matching Line Rev Tax.....	45
APMatchingLnTax	Accounts Payable Matching Line Tax Detai.....	46
APMatchingLnWHT	Accounts Payable Matching Line Tax Detail	47
apmr_mstr	Advanced Pricing Management Customer Relationship Master	48
apm_ctrl	Advanced Pricing Management Control.....	48
ApproveStatusTrans	Approve Status Transition	49
aprm_mstr	Application Parameter Master	49
apr_mstr	Application Registry.....	50
arc_ctrl	Accounts Receivable Control	52
art_mstr	Application Return Code Master	52
atdcd_det	Audit Trail Database Connection Detail	54

About This Guide

Introduction 2

How This Book Is Organized 2

Symbols and Conventions 3

Introduction

This book is intended for system administrators and programmers doing software conversions and custom programming.

How This Book Is Organized

See “Symbols and Conventions” for symbols.

Database tables are grouped by module and listed alphabetically, with the following information.

ad_mstr Address Master				
Field Name	Label	Col-Label	Format	Dec
ad_addr	Address		x(8)	
ad_address_id	Business Relation Address		9999999999	
ad_alt_um	Alternate UM	UM	x(2)	

- *Field Name*. The name of the field.
- *Label*. The field label as it appears on screens.
- *Col-Label*. The column label that appears on reports.
- *Format*. How, and what kind of, data can be displayed.
- *Dec*. The maximum number of decimal places that can be stored.

Some fields in the database are not currently used. These fields are either:

- User definable for custom programming
- Reserved for future use by QAD
- Obsolete (only used in earlier versions)

Each database table has at least one index. By default, Progress sorts and retrieves records using the primary index, which is indicated by an asterisk (*). Indexes have the following attributes.

Index-Name	Uni	Field-Name	Asc	Abbr
* ad_addr	yes	ad_domain	yes	no
		ad_addr	yes	no
ad_address_id	no	ad_address_id	yes	no
ad_edi_tpid	no	ad_domain	yes	no
		ad_edi_tpid	yes	no

- *Primary Index*. Indicated with an asterisk. The most frequently used index. Each table has one and only one primary index. Progress uses the primary index when retrieving records or ordering records for a list (like a report) if you don’t specify another index. The primary index reflects the most common order, or the most natural order, by which records are sorted.
- *Index Name*. The name of the index.
- *Uni (Unique)*. Yes indicates only one record in the table can have a particular index value.
- *Field Name*. Each index has one or more field components.
- *Asc (Ascending)*. Yes indicates that records are ordered and accessed by ascending field values.
- *Abbr (Abbreviated)*. For character data fields, a sort option that examines partial records. Tables with abbreviated indexes sort faster but require more disk space.

Symbols and Conventions

The following symbols are used in this book.

Symbol	Meaning
*	Primary Index
◇	New table, field, index
Δ	Changed field/index
!	Shows where a column label wraps to next line

The following conventions are used in this book.

Convention for Designating Fields	Meaning
[x]	Extent of array field
<prefix>__user<number>	User field (ac__user1)
<prefix>__dec<number>	User decimal data field (ac__dec01)
<prefix>__chr<number>	User character field (ac__chr01)
<prefix>__qad<number>	QAD reserved field (ac__qad01)
<prefix>_x<number>	Obsolete field (ac_xctr)

Database Definitions

The following pages contain an alphabetical listing of database definitions used in QAD Enterprise Applications Enterprise Edition.
