

QAD Adaptive Applications

Installation Guide: QAD Product Structure Maintenance, Version 1.2.1

January 2020

Overview 2

Requirements 2

Procedure 2

Overview

This document provides instructions for installing QAD Product Structure Maintenance into a QAD Enterprise Edition .NET UI environment.

Product Name Changes

Starting in September 2019, the new name for QAD's complete set of products is QAD Adaptive Applications. Additionally, QAD Adaptive ERP is the new name for QAD's ERP solution that includes the functionality of QAD Enterprise Applications – Enterprise Edition and the Channel Islands program, either located On-Premise or in the Cloud (formerly QAD Cloud ERP). Going forward, the terms QAD Enterprise Applications and Channel Islands will be deprecated but can still occur in documentation and training materials.

Requirements

- This version of QAD Product Structure Maintenance for QAD .NET UI supports Enterprise Edition versions 2016 EE and later.
- You must use YAB to install this version. QRA installations are not supported.
- These instructions apply only to on-premise installations. For information on installing QAD Product Structure Maintenance 1.2.1 into an Enterprise Edition cloud environment, contact QAD Cloud Operations.

Procedure

YAB is a configuration management tool you can use to start, stop, reconfigure, and maintain the consistency of your Enterprise Edition environments. Your environment is defined in terms of discrete units, or packages, which you can replace and add as needed.

See *QAD Enterprise Edition Installation Guide* for more information about using YAB.

Installation Steps

Follow these steps to install QAD Product Structure Maintenance into an on-premise environment:

- 1 Download the installation .zip file from the QAD Store Download Center.
- 2 Move the file to a file system that is accessible from the UNIX host where your Enterprise Edition environment is installed.
- 3 Change to the directory where Enterprise Edition is installed.

```
cd directory
```

- 4 Execute the following command to install the package:

```
yab install netui-module-productstructure-installer-1.2.x.x.zip
```

where 1.2.x.x is the package version of the installation.

The product installs.

- 5 Proceed to [Post-installation Tasks](#).

Post-installation Tasks

Restart any anti-virus programs that were shut down to perform QAD Product Structure Maintenance installation.
