Overview

This chapter discusses QAD Lot Trace Workbench installation requirements, the installation package, and pre-installation preparations.

Requirements

The following sections describe the software and environment and other requirements for QAD Lot Trace Workbench installation.

Software and Environment

You must have the following software and environment to install QAD Lot Trace Workbench:

- Enterprise Edition 2012.1, 2013, or 2014
- .NET UI 2.9.5 + CP2 (Cumulative Patch #2) or .NET UI 3.0.0

Unzip Utilities

The QAD Download Center provides product downloads as compressed ISO files in .zip or .7z format. The .7z format is used to overcome a limitation that prevents the zipping of files larger than 2 GB.

To unzip .7z files, use the free 7-Zip utility. Windows, Linux, and UNIX versions of this utility are available from:

<http://www.7-zip.org>

Unzipping the compressed product file using the appropriate utility yields an uncompressed ISO file.

Installation Components

QAD provides the following Lot Trace Workbench installation components:

- Install guide (this document) located at the top of the installation directory on the product media.
- Generic module installer
- Lot Trace Workbench (LTWB) package
 - data – System data for labels, menus, browses, and so on
 - mfg - 4GL code
 - client – LTWB plugin for .NET UI

Patches and Customized Programs

The Lot Trace Workbench installation package does not contain modifications to the existing QAD ERP programs. If you only install the Lot Trace Workbench installation package, you do not need to perform any QAD patch changes, customizations, or other changes.

Before You Begin

Perform the following actions before installing the Lot Trace Workbench package:

- 1 Back up your databases and supporting environments.
- 2 Note the installation locations for the following:
 - QDT
 - QAD product instance

Lot Trace Workbench Installation

This chapter describes Lot Trace Workbench (LTWB) package installation and post-installation configuration.

Overview 6

Provides an overview of the installation process.

Installation Procedure 6

Provides step-by-step instructions for a Linux/UNIX LTWB package installation in a character environment.

Post-installation Tasks 7

Describes LTWB configuration following installation.

Overview

The following sections describe how to install the QAD Lot Trace Workbench (LTWB) package and how to configure the product after installation.

Installation Procedure

The QAD LTWB package is installed from an ISO file downloaded from the QAD Download Center or from QAD physical product media.

To install the QAD LTWB package, do the following:

- 1 Log in as an administrative user with read, write, and execute permissions for your production environment. On Linux/UNIX systems, this user is typically `mfg`.

- 2 Make sure that you have JRE 1.6 or above installed and that it is the first JRE located in the environment variable `PATH`. Enter:

```
java -version
```

If the displayed version is 1.6 or higher, proceed to the next step.

- 3 Make sure that the `JAVA_HOME` variable is exported correctly. To see the directory of your installed JRE, enter:

```
echo $JAVA_HOME
```

- 4 Shut down any virus protection programs.

- 5 If you are installing from QAD physical product media, go to step 6. Otherwise, download the ISO file from the QAD Download Center and unzip it using the appropriate utility (see “Unzip Utilities” on page 2).

- 6 Mount the downloaded LTWB package ISO file or physical product media.

- 7 Change to the installation’s install directory by entering:

```
cd <Install_Dir>
```

- 8 Keep your environment running and enter the following Linux/UNIX commands. These commands can take some time to complete. During this time, you can launch another Linux terminal window and perform step 9 to view the installation progress.

Launch the Linux/UNIX installation script by entering:

```
./install.sh -i silent -Dconfig.src=$QDT -Dconfig.env=$ENV
```

Where:

`$QDT` is the location where QAD Deployment Toolkit (QDT) is installed.

`$ENV` is the environment name for the QAD product instance.

- 9 After you finish the installation, refer to `$TMP/installation.$USR.log` for a detailed report of the installation results. `$TMP` resolves to the Java system property `java.io.tmpdir` (typically `/tmp` on Linux/UNIX). `$USR` refers to the system user name. The last line of the log file indicates whether the installation was successful.

Post-installation Tasks

Restart any anti-virus programs that were shut down to perform QAD LTWB installation.
