Introduction

This book is intended for system administrators and programmers doing software conversions and custom programming. Cross-references for identifying new, changed, and deleted tables, fields, and indexes are included after the main section.

How This Book Is Organized

See “Symbols and Conventions” on page 3 for symbols.

Database tables are grouped by module and listed alphabetically, with the following information.

abd_det Asset Book Detail				
Field Name	Field Label	Column Label	Format	Dec
abd_active	Active	Act	yes/no	
abd_asset	Asset		x(12)	
abd_bonus	Bonus Percent	Bonus %	->>9.9<%	10

- *Field Name*. The name of the field.
- *Field Label*. The label as it appears on screens.
- *Column Label*. The label that appears on reports.
- *Format*. How, and what kind of, data can be displayed.
- *Dec*. The maximum number of decimal places that can be stored.

Some fields in the database are not currently used. These fields are either:

- Reserved for custom programming
- Reserved for future use by QAD
- Obsolete (only used in earlier product versions)

Each database table has at least one index. By default, Progress sorts and retrieves records using the primary index, which is indicated by an asterisk (*). Indexes have the following attributes.

Index Name	Uni	Field Name	Asc	Abbr
* abd_asset	yes	abd_active	yes	no
		abd_asset	yes	no
		abd_book	yes	no
		abd_asset	yes	no
		abd_book	yes	no

- *Primary Index*. Indicated with an asterisk. The most frequently used index. Each table has one and only one primary index. Progress uses the primary index when retrieving records or ordering records for a list (like a report) if you don't specify another index. The primary index reflects the most common order, or the most natural order, by which records are sorted.
- *Index Name*. The name of the index.
- *Uni (Unique)*. Yes indicates only one record in the table can have a particular index value.
- *Field Name*. Each index has one or more field components.
- *Asc (Ascending)*. Yes indicates that records are ordered and accessed by ascending field values.
- *Abbr (Abbreviated)*. For character data fields, a sort option that examines partial records. Tables with abbreviated indexes sort faster but require more disk space.

Symbols and Conventions

The following symbols are used in this book. For this version of *Database Definitions*, new and changed are relative to the previous publication..

Symbol	Meaning
*	Primary Index
◇	New table, field, index
Δ	Changed field/index
!	Shows where a column label wraps to next line

The following conventions are used in this book.

Convention for Designating Fields	Meaning
[x]	Extent of array field
<prefix>__user<number>	User field (ac__user1)
<prefix>__dec<number>	User decimal data field (ac__dec01)
<prefix>__chr<number>	User character field (ac__chr01)
<prefix>__qad<number>	QAD reserved field (ac__qad01)
<prefix>__x<number>	Obsolete field (ac__xctr)

Other QAD Documentation

- For an overview of new features and software updates, see the *Release Bulletin*.
- For software installation instructions, refer to the appropriate installation guide for your system.
- For conversion information, refer to the *Conversion Guide*.
- For an overview of system features and instructions on navigating the user interface, see *User Guide: QAD User Interfaces*.
- For detailed information on using system features, refer to the relevant user guide.
- For technical details, refer to *Entity Diagrams* and *Database Definitions*.

For a complete list of QAD Documentation, visit the QAD Support site.

Online Help

There is an extensive online help system. Help is available for most fields found on a screen. Procedure help is available for most programs that update the database. Most inquiries, reports, and browses do not have procedure help.

For information on using the help system in the different environments, refer to *User Guide: QAD User Interfaces*.

QAD Web Site

The QAD Web site provides a wide variety of information about the company and its products. You can access the Web site at:

<http://www.qad.com>

For users with a QAD Web account, product documentation is available for viewing or downloading from the QAD Online Support Center at:

<http://support.qad.com/>

You can register for a QAD Web account by accessing the Web site. Your customer ID number is required. Access to certain areas is dependent on the type of agreement you have with QAD.

Most user documentation is available in two formats:

- Portable document format (PDF) files can be downloaded from the QAD Web site to your computer. You can view and print them with the free Adobe Acrobat Reader.
- HTML files let you view user documentation through your Web browser and use search tools for easily locating topics of interest.

6 Database Definitions

The background of the page features a grayscale, close-up photograph of several interlocking mechanical gears. The gears are positioned diagonally, with one gear in the foreground being sharper than the others in the background, which are blurred. The lighting creates highlights and shadows on the teeth of the gears, emphasizing their mechanical nature.
