About This Guide

Other MFG/PRO Documentation **2**

Online Help **3**

QAD Web Site **3**

Conventions **4**

This books includes diagrams that detail key relationships among various tables in the MFG/PRO database.

Other MFG/PRO Documentation

- For an overview of new features and software updates, see the *Release Bulletin*.
- For software installation instructions, refer to the appropriate installation guide for your system.
- For conversion information, refer to the *Conversion Guide*.
- For instructions on navigating and using the QAD Desktop interface, see *User Guide: QAD Desktop*.
- For instructions on navigating the MFG/PRO Windows and character environments, refer to *User Guide Volume 1: Introduction*.
- For information on using MFG/PRO, refer to the *User Guides*.
- For technical details about MFG/PRO tables, see *Database Definitions*.
- For information on using features that let MFG/PRO work with external applications, see the *External Interface Guides*. Each book in this set describes a separate interface such as the Warehousing application program interface (API) and Q/LinQ, the tool set for building and using data exchange tools.
- To view documents online in PDF format, see the *Documents on CD* and *Supplemental Documents on CD*. The CD-ROM media includes complete instructions for loading the documents on a Windows network server and making them accessible to client computers.

Note MFG/PRO installation guides are not included on a CD. Printed copies are packaged with your software. Electronic copies of the latest versions are available on the QAD Web site.

Online Help

MFG/PRO has an extensive online help system. Help is available for most fields found on a screen. Procedure help is available for most programs that update the database. Most inquiries, reports, and browses do not have procedure help.

For information on using the help system in the different MFG/PRO environments, refer to *User Guide Volume 1: Introduction* and *User Guide: QAD Desktop*.

QAD Web Site

The QAD Web site provides a wide variety of information about the company and its products. You can access the Web site at:

<http://www.qad.com>

For MFG/PRO users with a QAD Web account, product documentation is available for viewing or downloading at:

<http://support.qad.com/documentation/>

You can register for a QAD Web account by accessing the Web site and clicking the Accounts link at the top of the screen. Your customer ID number is required. Access to certain areas is dependent on the type of agreement you have with QAD.

Most user documentation is available in two formats:

- Portable document format (PDF). PDF files can be downloaded from the QAD Web site to your computer. You can view them with the free Adobe Acrobat Reader. A link for downloading this program is also available on the QAD Web site.
- HTML. You can view user documentation through your Web browser. The documents include search tools for easily locating topics of interest.

Features also include an online solution database to help MFG/PRO users answer questions about setting up and using the product. Additionally, the QAD Web site has information about training classes and other services that can help you learn about MFG/PRO.

Conventions

MFG/PRO is available in several interfaces: Desktop (Web browser), Windows, and character. To standardize presentation, the documentation uses the following conventions:

- MFG/PRO screen captures show the Desktop interface.
- References to keyboard commands are generic. For example, choose Go refers to:
 - The forward arrow in Desktop
 - F2 in the Windows interface
 - F1 in the character interface

In the character and Windows interfaces, the Progress status line at the bottom of a program window lists the main UI-specific keyboard commands used in that program. In Desktop, alternate commands are listed in the right-click context menu.

For complete keyboard command summaries for each MFG/PRO interface, refer to the appropriate chapters of *User Guide: QAD Desktop* and *User Guide Volume 1: Introduction*.

This document uses the text or typographic conventions listed in the following table.

If you see:	It means:
<code>monospaced text</code>	A command or file name.
<i>italicized monospaced text</i>	A variable name for a value you enter as part of an operating system command; for example, <i>YourCDROMDir</i> .
indented command line	A long command that you enter as one line, although it appears in the text as two lines.
Note	Alerts the reader to exceptions or special conditions.
Important	Alerts the reader to critical information.
Warning	Used in situations where you can overwrite or corrupt data, unless you follow the instructions.

Diagram Conventions

This chapter explains the diagram conventions used in this volume.

Introduction **6**

How to Use the Diagrams **8**

About Table Names **8**

Introduction

This guide details major relationships between tables in an MFG/PRO database. These diagrams are designed to help:

- Programmers interested in customizing or modifying the standard MFG/PRO system. The diagrams show relationships that must be preserved in any customization or modification.
- Programmers writing queries or custom reports. The diagrams show which tables can be joined and the field specifications required to make them join. Note that all possible table relationships are not shown, just the major ones.
- Administrators interested in the availability of custom reports. The diagrams show which reports you can prepare.
- Users of Progress Results who want to determine the relationships available for reporting.

These diagrams are meant to be used in conjunction with *Database Definitions*, which is available separately.

Entity Relationship Diagrams

In a relational database, each table is a self-contained collection of data about a single thing (or *entity*). There are five relationship line identifiers that can be combined to distinguish 15 specific entity relationships.

The five relationship lines are displayed in Figure 1.1

Fig. 1.1
Table Relationship
Description

Relationships are identified by using the lines, as shown in Figure 1.2.

Fig. 1.2
Table Relationship
Description

A bar symbol (|) indicates an OR relationship when more than one field can be used for joining.

Relationship Examples

Figure 1.3 shows that one customer can have zero or more sales orders and that one sales order has one and only one customer.

Fig. 1.3
cm_mstr to so_mstr
Relationship
Example

To join these two tables within Progress, you would set so_cust equal to cm_addr or vice versa.

```
FOR EACH cm_mstr EACH so_mstr WHERE cm_addr = so_cust:
  DISPLAY cm_addr so_nbr.
END.
```

Figure 1.4 shows that one accounts payable master can have zero or one check masters and that one check master must have one and only one accounts payable master.

Fig. 1.4
ap_mstr to ck_mstr
Relationship
Example

To join these two tables within Progress, set ap_ref equal to ck_ref and ap_type equal to CK.

```
FOR EACH ap_mstr EACH ck_mstr WHERE ap_ref = ck_ref AND ap_type = CK:
  DISPLAY ap_vend ck_bank ck_nbr.
END.
```

How to Use the Diagrams

The diagrams are divided into two sections, organized approximately by MFG/PRO modules. The second section has diagrams for relationships that apply only if you are using the optional European Accounting (EA) module.

The most practical way to find information about a particular area is to turn to the diagram for that area. Find the entity (table) that you are interested in and trace out the relationships.

Not all relationships are shown in any one diagram; if you are interested in the other relationships, use the either of the two cross-reference tables to find the other diagrams the tables appear in:

- “MFG/PRO Cross-Reference” on page 130
- “European Accounting Cross-Reference” on page 178

When creating a report or browse, use the entity relationship diagrams to decide which table names you should use (and the join relationships). If no relationship exists between two tables, a report showing such a relationship is not possible.

For Progress Results users, these diagrams indicate the relationships that you can show. Progress Results shows the names of tables that have relationships with a specified table. These diagrams show those tables in graphic form and show the subsidiary relationships between tables.

About Table Names

In MFG/PRO, the table name and the table name description are closely related. The table name consists of a prefix and type, separated by an underscore (_). Common table types are listed in Table 1.1.

Table 1.1
Database Table
Types

Table Type	Meaning	Description
ctrl	Control	Parameters and logical fields that control other functions.
mstr	Master Table	Used for data storage.
det	Detail Table	Detail related to another record. There are typically many detail records associated with one master record.

Table Type	Meaning	Description
hist	History Table	Contains records created by activity within the database.
plan	Planning Table	Data for planning functions.
wkfl	Work Table	Used to support other functions.

In the typical case, the table prefix consists of two or three significant letters of the table name description.

Example The table name for accounts receivable master is ar_mstr, and ck_mstr is the table name for check master.

In most cases, the first letter of the table name is the first letter of the description; the few exceptions involve tables such as line changeover master, which is chg_mstr.

Detail tables related to master data typically have the same prefix with the addition of the letter d.

Example The detail table associated with vo_mstr is vod_det.

Within a table, all the data elements use the same prefix.

Example The repetitive production schedule (rps_mstr) table includes fields named rps_part and rps_record.

10 MFG/PRO eB2 Entity Diagrams

The background of the page is a grayscale photograph of several interlocking mechanical gears. The gears are of different sizes and are positioned in a way that creates a sense of depth and motion. The lighting is soft, highlighting the metallic texture and the precise teeth of the gears.

Section 1

MFG/PRO Table Relationships

This section includes entity diagrams and cross-reference information for standard MFG/PRO modules.

MFG/PRO Entity Diagrams **13**

Table/Diagram Cross-Reference **129**

12 MFG/PRO eB2 Entity Diagrams

The background of the page is a grayscale photograph of several interlocking gears. The gears are of different sizes and are positioned in a way that creates a sense of depth and mechanical complexity. The lighting is soft, highlighting the teeth of the gears and creating subtle shadows.

Chapter 2

MFG/PRO Entity Diagrams

These diagrams are meant to be used in conjunction with *Database Definitions*, which is available separately. The entity diagrams are in alphabetical order starting on the next page.

Table 3.1 on page 130 lists each table included in the diagrams and indicates the title of the diagram where the table appears.

Table 3.1 — MFG/PRO Database Table Cross-Reference — (Page 31 of 31)

The background of the page features a grayscale image of several interlocking gears. The gears are of different sizes and are positioned in a way that creates a sense of depth and mechanical complexity. The lighting is soft, highlighting the metallic texture of the gears.

Section 2

European Accounting Table Relationships

This section includes entity diagrams and cross-reference information for the European Accounting module.

European Accounting Entity Diagrams **163**

Table/Diagram Cross-Reference **177**

The background of the page features a grayscale image of several interlocking gears. The gears are of different sizes and are positioned in a way that creates a sense of depth and mechanical complexity. The lighting is soft, highlighting the metallic texture of the gears.

Chapter 4

European Accounting Entity Diagrams

These diagrams are meant to be used in conjunction with *Database Definitions*, which is available separately. European Accounting entity diagrams are in alphabetical order starting on the next page.

Table 5.1 on page 178 lists each table included in the diagrams and indicates the title of the diagram where the table appears.
