Introduction

This book is intended for Advanced Pricing Management (APM) system administrators and programmers doing software conversions and custom programming.

How This Book Is Organized

▶ See “Symbols and Conventions” for symbols.

Advanced Pricing Management uses two databases: Structures and Transactions. The Structures database covers the definitions and codes for the pricing activities such as promotions and rebates. Definitions of these tables are included in Section 1. The Transactions database covers the actual data, such as accruals, for the pricing activities. Definitions of these tables are included in Section 2.

Database tables are grouped by module and listed alphabetically, with the following information.

abd_det Asset Book Detail				
Field Name	Field Label	Column Label	Format	Dec
abd_active	Active	Act	yes/no	
abd_asset	Asset		x(12)	
abd_bonus	Bonus Percent	Bonus %	->>9.9<%	10

- *Field Name.* The name of the field.
- *Field Label.* The label as it appears on screens.
- *Column Label.* The label that appears on reports.
- *Format.* How, and what kind of, data can be displayed.
- *Dec.* The maximum number of decimal places that can be stored.

Some fields in the database are not currently used. These fields are either:

- Reserved for custom programming
- Reserved for future use by QAD
- Obsolete (only used in earlier versions of Advanced Pricing Management)

Each database table has at least one index. By default, Progress sorts and retrieves records using the primary index, which is indicated by an asterisk (*). Indexes have the following attributes.

Index Name	Uni	Field Name	Asc	Abbr
abd_active	yes	abd_active	yes	no
		abd_asset	yes	no
		abd_book	yes	no
* abd_asset	yes	abd_asset	yes	no
		abd_book	yes	no

- **Primary Index.** Indicated with an asterisk. The most frequently used index. Each table has one and only one primary index. Progress uses the primary index when retrieving records or ordering records for a list (like a report) if you don't specify another index. The primary index reflects the most common order, or the most natural order, by which records are sorted.
- **Index Name.** The name of the index.
- **Uni (Unique).** Yes indicates only one record in the table can have a particular index value.
- **Field Name.** Each index has one or more field components.
- **Asc (Ascending).** Yes indicates that records are ordered and accessed by ascending field values.
- **Abbr (Abbreviated).** For character data fields, a sort option that examines partial records. Tables with abbreviated indexes sort faster but require more disk space.

Symbols and Conventions

The following symbols are used in this book.

Symbol	Meaning
*	Primary Index
!	Shows where a column label wraps to next line

Other APM Documentation

- For software installation instructions, refer to the appropriate installation guide for your system.
- For information on using Advanced Pricing Management, refer to *User Guide: Advanced Pricing Management* and *User Guide Supplement: Advanced Pricing Management*.

4 Advanced Pricing Management Database Definitions

- For additional technical details, refer to *Advanced Pricing Management Entity Diagrams*.
- To view documents online in PDF format, see the *Supplemental Documents on CD*.

Note Advanced Pricing Management installation guides are not included on a CD. Printed copies are packaged with your software. Electronic copies of the latest versions are available on the QAD Web site.

Online Help

Advanced Pricing Management has an extensive online help system. Help is available for most fields found on a screen. Procedure help is available for most programs that update the database. Most inquiries, reports, and browses do not have procedure help.

For information on using the help system, refer to *User Guide: Advanced Pricing Management*.

QAD Web Site

The QAD Web site provides a wide variety of information about the company and its products. You can access the Web site at:

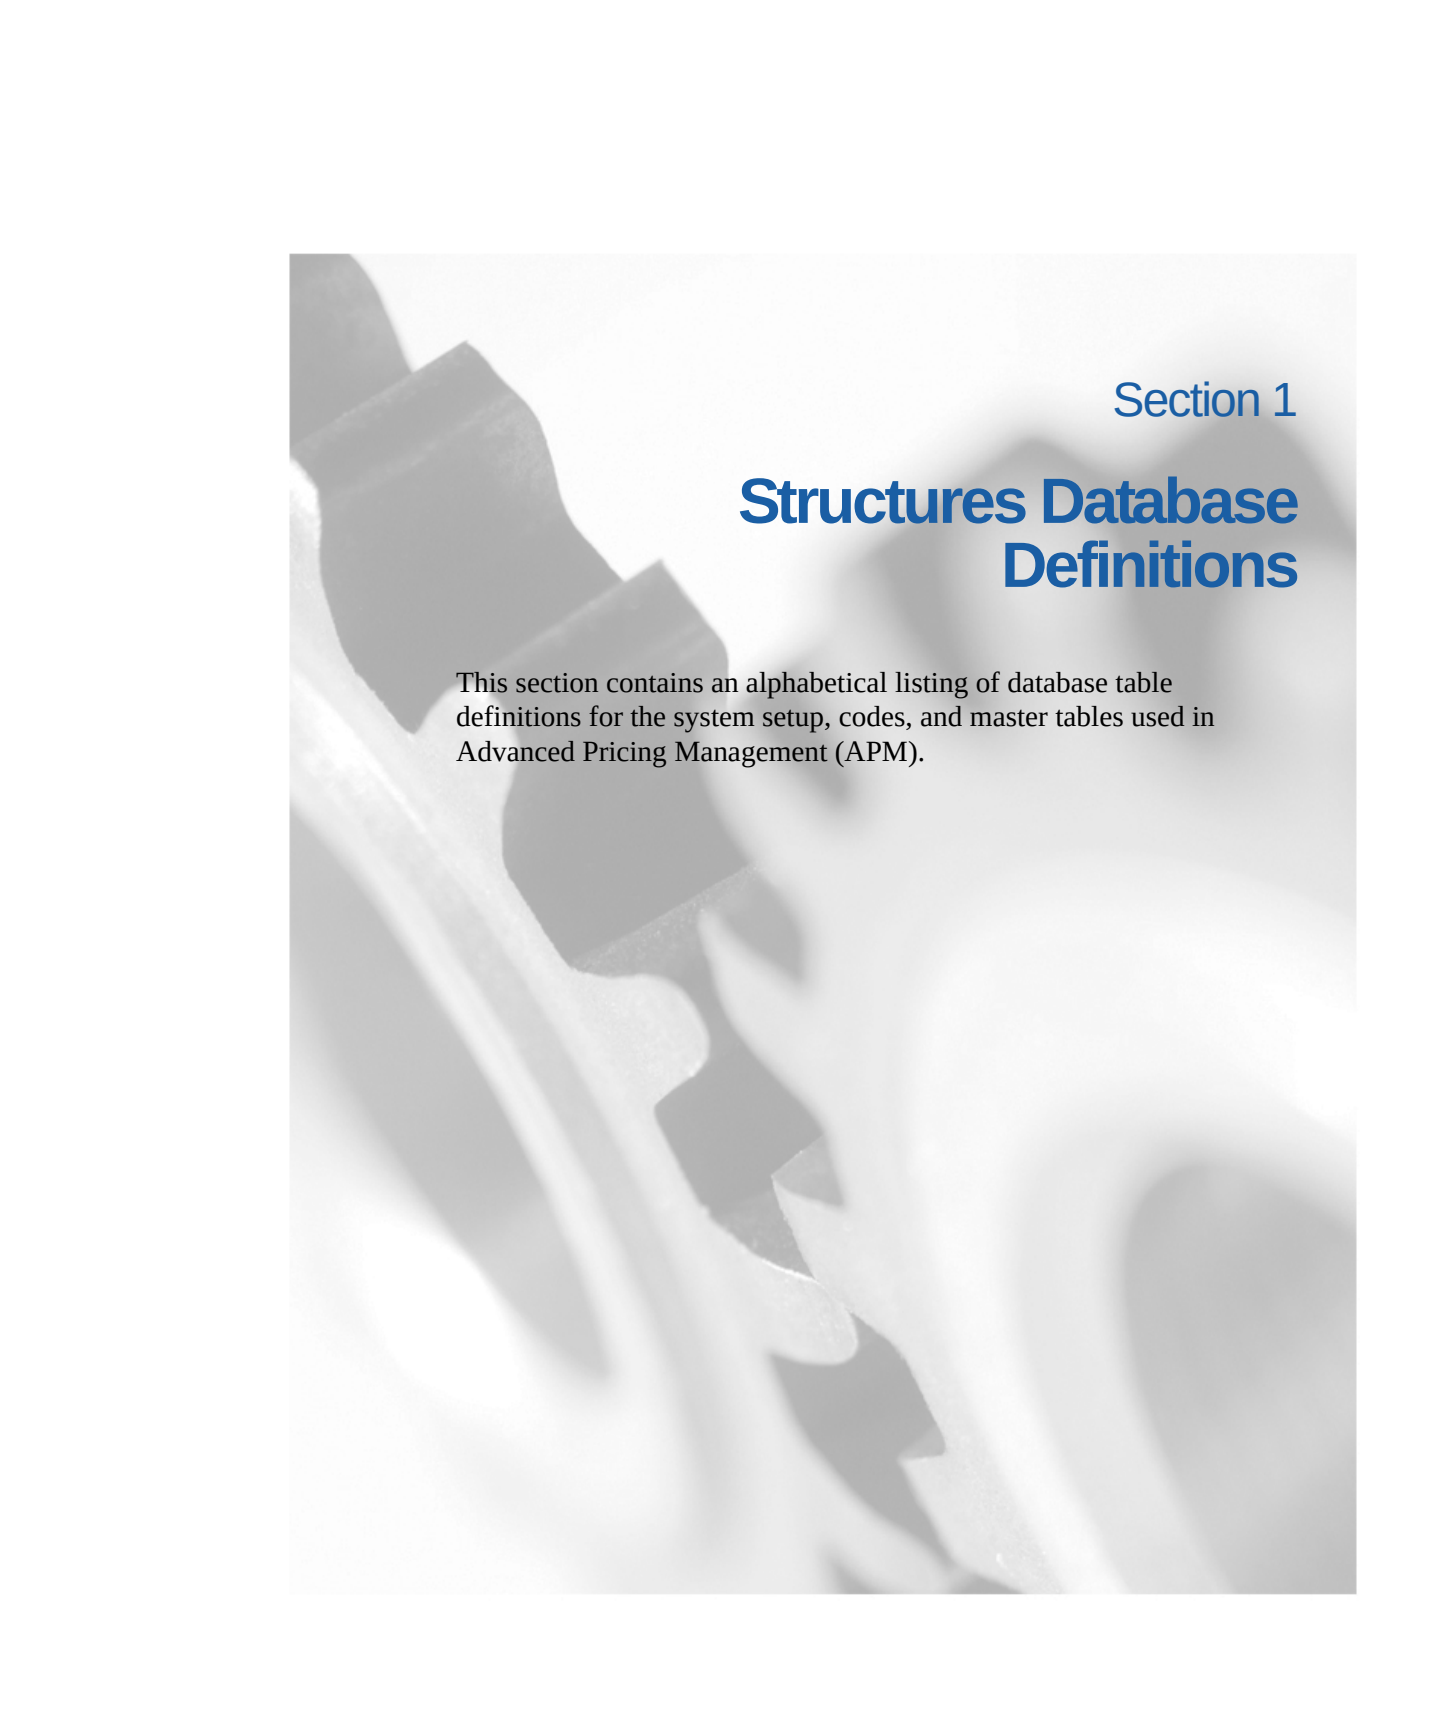

<http://www.qad.com>

For users with a QAD Web account, product documentation is available for viewing or downloading at:

<http://support.qad.com/documentation/>

You can register for a QAD Web account by accessing the Web site and clicking the Accounts link at the top of the screen. Your customer ID number is required. Access to certain areas is dependent on the type of agreement you have with QAD.

Web features include an online solution database to help users answer questions about setting up and using the product. Additionally, the QAD Web site has information about training classes and other services that can help you learn about Advanced Pricing Management.

The background of the page features a grayscale, close-up photograph of several interlocking mechanical gears. The gears are positioned diagonally, with some in sharp focus and others blurred in the background, creating a sense of depth and mechanical complexity.

Section 1

Structures Database Definitions

This section contains an alphabetical listing of database table definitions for the system setup, codes, and master tables used in Advanced Pricing Management (APM).

The background of the page features a grayscale image of several interlocking gears. The gears are of different sizes and are positioned in a way that creates a sense of depth and mechanical complexity. The lighting is soft, highlighting the metallic texture of the gears.

Section 2

Transactions Database Definitions

This section contains an alphabetical listing of database table definitions for the transaction and work area datasets used in Advanced Pricing Management (APM).
