

QAD CLOUD QMS

QAD Cloud QMS (Quality Management System) helps your company establish quality processes that comply with government regulations and industry requirements. You will no longer have to manually maintain documents in spreadsheets, PDFs, and printed reports when you use QAD Cloud QMS. You only need to enter information once and it will be shared throughout the entire solution. Using QAD Cloud QMS, you can easily implement SPC, CAPA, APQP and other industry best practices.

VALUE AND BENEFITS

Reduces data errors and saves time — data in QAD Cloud QMS is immediately available throughout the solution.

Documents your inspection and SPC programs — and provides reports that can be shared with customers, auditors and government regulators.

Improves document control — ensures users can access only one version of each document for current activities.

Supports Advanced Product Quality Planning (APQP) — enables you to easily adopt best practice methods for documentation, process flow, process FMEA (failure modes and effects analysis), process control plans and work instructions.

Simplifies management of your Corrective And Preventive Action (CAPA) process — helps you to investigate nonconforming processes and procedures.

KEY FEATURES

- Automates the supplier management process, including supplier scorecards, provides supplier access to corrective actions, manages supplier certification and automates supplier grading based on performance
- Supports APQP and CAPA
- Manages gauge calibration schedules and provides status reports and analysis
- Streamlines the entire audit process, including scheduling, notifications, linking to historical documents, generating reports and initiating and managing escalations where necessary
- Enables risk assessment and generates heat maps and mitigation plans
